September 9, 2022

Mr. Neal Stone Town of North Hempstead 210 Plandome Road Manhasset, NY 11030

Re: Phase I Environmental Site Assessment

243 Sheridan Street (Section 11, Block 44, Lot 74)

New Cassel, NY 11590

AKRF Project Number: 200225

Dear Mr. Stone:

AKRF, Inc. (AKRF) is pleased to submit this Phase I Environmental Site Assessment (ESA) Report for the above-referenced property in New Cassell, NY. This report includes the findings of a reconnaissance of the property and an evaluation of readily available historical information, selected environmental databases, and electronic records. AKRF met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 and the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) rule unless noted otherwise in Section 7.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely, AKRF, Inc.

Deborah Shapiro, QEP Senior Vice President Timothy McClintock
Technical Director

Enc.

243 SHERIDAN STREET SECTION 11, BLOCK 44, LOT 74

NEW CASSEL, NY

Phase I Environmental Site Assessment Report

AKRF Project Number: 200225

Prepared for:

Mr. Neal Stone Town of North Hempstead 210 Plandome Road Manhasset, NY 11030

Prepared by:

AKRF, Inc.

440 Park Avenue South, 7th Floor New York, NY 10016 212-696-0670

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by the Town of North Hempstead (TONH, the "user" or "client") to prepare a Phase I Environmental Site Assessment (ESA) of the property located at 243 Sheridan Street in the Hamlet of New Cassel, NY (the "Property"). The approximately 6,000-square foot (sf) Property was defined on the Nassau County Tax Map as Section 11, Block 44, Lot 74. A map showing the location of the Property is provided as Figure 1.

At the time of AKRF's reconnaissance, the Property contained a one-story, single-family residence with a cellar, a detached garage, and exterior paved and landscaped areas. Historically, the Property was developed with a one-story residence with a cellar and a detached garage by 1929; an addition was constructed in the southwestern portion of the residence prior to 1941. The footprints of the Property buildings have remained generally consistent with the footprints observed during AKRF's reconnaissance since at least 1941. The area surrounding the Property was primarily residential and commercial, with some educational, industrial, and recreational uses.

This Phase I ESA was performed in conformance with American Society for Testing and Materials (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice (the "Standard"), thereby satisfying United States Environmental Protection Agency (USEPA) "Standards and Practices for All Appropriate Inquiries (AAI); Final Rule" [40 Code of Federal Regulations (CFR) Part 312] Federal Register Vol. 70, No. 210, November 1, 2005. Any exceptions to, or deletions from, the Standard are described in Section 7.0. The Phase I ESA was also prepared in accordance with RFP No. TNH225-2019 between AKRF and TONH Department of Planning and Environmental Protection. A Brownfields Property Approval form for Petroleum Contamination was reviewed and approved by USEPA Region 2 on January 31, 2022 as part of Grant Number BF-9649919.

The term Recognized Environmental Condition (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), Business Environmental Risk (BER), and De Minimis Condition. The term Historic Recognized Environmental Condition (HREC) means a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). The term Controlled Recognized Environmental Condition (CREC) means a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). The term Business Environmental Risk (BER) means a risk which can have a material environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard E1527-13. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations. A De Minimis Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

A summary of the assessment findings is presented below:

Historic Recognized Environmental Condition (HREC)

No HRECs were identified.

Controlled Recognized Environmental Condition (CREC)

• No CRECs were identified.

Recognized Environmental Conditions (RECs)

- Suspected fill and vent piping potentially associated with a current or former petroleum storage tank
 were observed protruding from the foundation wall in the southwestern portion of the residence,
 adjacent to the front door. According to records obtained from the TONH Building Department, a
 certificate of compliance associated with the installation of an oil burner at the Property was issued in
 1953.
- The Property was connected to the Nassau County sewer system by 1982; however, many of the properties in the surrounding area contained cesspools prior to the 1980s. No records indicating the presence or subsequent closure of a cesspool at the Property were identified.
- A spill incident (Spill No. 0011983) was reported at 746 Broadway, located north-adjacent to the Property. According to available information, petroleum-contaminated soil was identified following the removal of a 550-gallon UST; however, no detail regarding the nature of the release or the actions taken to address the conditions were identified.

Business Environmental Risks [items outside the scope of ASTM E1527-13 such as asbestos-containing material (ACM), lead-based paint (LBP), lead-containing paint (LCP), and/or polychlorinated biphenyls (PCBs) in building materials or fill/debris

- A mound of potential fill material from an unknown source was observed in the southwestern portion of the Property.
- There is a potential for the presence of ACM, LBP/LCP, PCB-containing material, and/or mercury-containing material in the Property buildings, historic fill material, buried structures, and/or buried demolition debris at the Property.
- There is a potential for the presence of water damage and mold within the Property buildings.

De Minimis Conditions

• Some general refuse and building materials (broken siding, glass, wood, etc.) were noted throughout exterior portions of the Property.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by the Town of North Hempstead (TONH, the "user" or "client") to prepare a Phase I Environmental Site Assessment (ESA) of the property located at 243 Sheridan Street in the Hamlet of New Cassel, NY (the "Property"). The approximately 6,000-square foot (sf) Property was defined on the Nassau County Tax Map as Section 11, Block 44, Lot 74. A map showing the location of the Property is provided as Figure 1.

At the time of AKRF's reconnaissance, the Property contained a one-story, single-family residence with a cellar, a detached garage, and exterior paved and landscaped areas. Historically, the Property was developed with a one-story residence with a cellar and a detached garage by 1929; an addition was constructed in the southwestern portion of the residence prior to 1941. The footprints of the Property buildings have remained generally consistent with the footprints observed during AKRF's reconnaissance since at least 1941. The area surrounding the Property was primarily residential and commercial, with some educational, industrial, and recreational uses.

This Phase I ESA was performed in conformance with American Society for Testing and Materials (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice (the "Standard"), thereby satisfying United States Environmental Protection Agency (USEPA) "Standards and Practices for All Appropriate Inquiries (AAI); Final Rule" [40 Code of Federal Regulations (CFR) Part 312] Federal Register Vol. 70, No. 210, November 1, 2005. Any exceptions to, or deletions from, the Standard are described in Section 7.0. The Phase I ESA was also prepared in accordance with RFP No. TNH225-2019 between AKRF and TONH Department of Planning and Environmental Protection. A Brownfields Property Approval form for Petroleum Contamination was reviewed and approved by USEPA Region 2 on January 31, 2022 as part of Grant Number BF-9649919.

The scope of services for the assessment included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; leaks; and/or odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- The reconnaissance of the Property included observation of any readily visible suspect asbestoscontaining material (ACM) and potential lead-based paint (LBP)/lead-containing paint (LCP). However, no samples were collected or analyzed and this reconnaissance provides neither definitive nor exhaustive information.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Property.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to USEPA guidelines.
- Historical fire insurance maps, topographic maps, and aerial photographs for the Property and nearby properties were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: National Priority List (NPL); Delisted NPL; Superfund Enterprise Management System [SEMS, formerly Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)], including Superfund Enterprise Management System Archive (SEMS-ARCHIVE); Emergency Response Notification

System (ERNS); Toxic Chemical Release Inventory System (TRIS); and Federal Institutional Control/Engineering Control Registries. The federal listing of facilities that are subject to corrective action under the Resource Conservation and Recovery Act (RCRA) Corrective Action Reports (CORRACTS) is discussed with the state databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the Property and other properties within predetermined radii: petroleum and hazardous material spills (SPILLS) and Leaking Storage Tanks (LTANKS); RCRA Notifiers; Chemical Bulk Storage (CBS); Solid Waste Facilities/Landfill Sites (SWF/LF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); State Hazardous Substance Waste Disposal Sites (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); Brownfield Cleanup Program (BCP); and Registered Dry Cleaners. Proprietary databases maintained by Environmental Data Resources (EDR) that list Historic Cleaners, Historic Auto Sites, and Manufactured Gas Plant Sites also were reviewed.
- State, county, and local agency file reviews including the New York State Department of Environmental Conservation (NYSDEC), New York State Department of Health (NYSDOH), Nassau County Department of Health (NCDOH), Nassau County Fire Commission (NCFC), Nassau County property records, TONH property records were conducted for the Property only.

2.0 PHYSICAL PROPERTY DESCRIPTION

Visual reconnaissance of the Property was performed on February 10, 2022 by Mr. Timothy McClintock of AKRF. At the time of AKRF's reconnaissance, the weather was clear and the temperature was approximately 50 °F. The visibility of the Property and the surrounding area was not obscured by weather; however, the on-site structures were inaccessible (condemned/boarded shut). Therefore, only exterior portions of the Property were inspected for the presence of stained surfaces, evidence of storage tanks, drums, leaking pipes, and transformers, suspect ACM, suspect LBP/LCP, and other evidence of hazardous material usage and storage on-site. Neighboring properties were also viewed, but only from public rights-of-way. A map detailing the physical layout of the Property including adjacent land use is provided as Figure 2. Photographs documenting the reconnaissance are included in Appendix A.

2.1 General Property Conditions

At the time of AKRF's reconnaissance, the approximately 6,000-sf Property contained a one-story, single-family residence with a detached garage and exterior asphalt/concrete-paved and landscaped areas. The residence and shed were inaccessible (condemned/boarded shut); therefore, the conditions within the on-site structures could not be evaluated during AKRF's reconnaissance. The exterior of the residence generally consisted of concrete, fiber-cement shingle siding, and wood, with an asphalt shingle roof. The building materials were observed to be in generally poor condition, with chipped paint and broken/missing siding noted. The doors and windows of the residence were secured with plywood. Suspected fill and vent piping potentially associated with a current or former petroleum storage tank were observed protruding from the foundation wall along the asphalt-paved driveway, adjacent to the northwestern corner of the residence. A detached wooden garage was located in the northwestern corner of the Property, with chipped paint and broken/missing siding noted on the exterior of the garage. A mound of potential fill material from an unknown source was observed in the southwestern portion of the Property, and some general refuse and building materials (broken siding, glass, wood, etc.) were noted throughout exterior portions of the Property.

2.2 Topography and Hydrogeology

Based on the United States Geological Survey (USGS) 7.5-Minute Quadrangle Map for Hicksville, NY (2019) and Freeport, NY (2019), and information presented in the regulatory agency database report (*Appendix H*), the Property is situated approximately 120 feet above the North American Vertical Datum of 1988 (NAVD 88), an approximation of mean sea level. Topography at the Property was generally flat, with surface topography in the surrounding area sloping gently down to the south.

Based on regional topography and the USGS Long Island Depth to Water Viewer, depth to groundwater in the vicinity of the Property is estimated to be approximately 45 to 55 feet below ground surface and is expected to flow in a southerly direction. However, actual groundwater levels and/or flow direction can be affected by many factors, including seasonal fluctuations in precipitation, subsurface openings or obstructions such as basements/cellars, utilities, bedrock geology, and other factors beyond the scope of this assessment.

2.3 Hazardous Substances

Generation and storage of hazardous substances was not observed in readily accessible and visible areas of the Property during AKRF's reconnaissance.

2.4 Petroleum Products

Suspected fill and vent piping potentially associated with a current or former petroleum storage tank were observed protruding from the foundation wall along the asphalt-paved driveway, adjacent

to the northwestern corner of the residence. No other evidence of the storage/use of petroleum products was observed in readily accessible and visible areas of the Property during AKRF's reconnaissance.

2.5 Storage Tanks

2.5.1 Underground Storage Tanks (USTs)/Aboveground Storage Tanks (ASTs)

The Property was not registered on the NYSDEC Petroleum Bulk Storage (PBS) database; however, suspected fill and vent piping potentially associated with a current or former petroleum storage tank were observed protruding from the foundation wall along the asphalt-paved driveway, adjacent to the northwestern corner of the residence. According to records obtained from the TONH Building Department (see Section 4.2.3), a certificate of compliance associated with the installation of an oil burner at the Property was issued in 1953.

Off-site USTs and ASTs are discussed in Section 5.2.2.

2.6 Other Suspect Containers

No other suspect containers were observed in readily accessible and visible areas of the Property during AKRF's reconnaissance.

2.7 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, PCBs, which provided beneficial insulating properties, were manufactured for use in a wide variety of products, primarily in electrical equipment such as transformers, capacitors, fluorescent light fixtures (especially ballasts), and voltage regulators, but also in hydraulic fluids (such as those used in old trash compactors) and some other products. Fluorescent lights, electrical switches, and thermostats may contain mercury.

Based on the age of the Property buildings (the residence and garage were constructed circa 1930 and 1940, respectively), caulking, electrical equipment and switches, lighting fixtures, and thermostats may include PCB- and/or mercury-containing components. PCBs and/or mercury may also be present in historic fill material, buried structures, and/or buried demolition debris at the Property. Although outside of the scope of ASTM E1527-13, the potential presence of PCBs and/or mercury at the Property is considered a business environmental risk.

2.8 Lead-Based Paint (LBP)

Based on the age of the Property buildings (the residence and garage were constructed circa 1930 and 1940, respectively), LBP, defined by the USEPA as containing greater than or equal to 0.5% [5,000 parts per million (ppm)] lead by dry weight, or lead-containing paint (LCP), that contains any detectable level of lead, may be present on and within the building. Visible exterior painted surfaces at the Property were generally observed to be in poor condition, with chipped paint noted throughout. LBP/LCP may also be present in historic fill material, buried structures, and/or buried demolition debris at the Property. Although outside of the scope of ASTM Standard E1527-13, the potential presence of LBP/LCP at the Property is considered a business environmental risk.

AKRF's reconnaissance did not constitute and cannot substitute for a LBP survey, which includes comprehensive inspection and material sampling with laboratory testing. Any repair, renovation, or demolition activities with the potential to disturb LBP/LCP should be performed in accordance with the applicable Occupational Safety and Health Administration (OSHA), United States Housing and Urban Development (HUD), USEPA, and local regulations. Additional requirements, even if no disturbance is planned (e.g., tenant notification, inspections, contractor licensing, and abatement), apply to occupied residential buildings.

2.9 Asbestos-Containing Materials (ACM)

Asbestos is a name applied to a group of natural minerals with particularly good fire resistant and insulation properties. In addition to insulation/fireproofing products, asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and a range of other products. Materials containing more than one percent asbestos are considered ACM. ACM are classified as friable or non-friable: friable (e.g., most spray-on fireproofing) ACM more readily release asbestos fibers than non-friable ACM (e.g., vinyl flooring and most roofing materials).

Suspect ACM observed in readily accessible and visible areas of the Property during AKRF's reconnaissance included fiber-cement shingle siding, roofing materials, mastics, and mortar. The suspect ACM were generally noted to be in good to damaged condition. Additional ACM may be present in other inaccessible locations of the building. ACM may also be present in historic fill material, buried structures, and/or buried demolition debris at the Property. Although outside of the scope of ASTM E1527-13, the potential presence of ACM at the Property is considered a business environmental risk.

AKRF's reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing. Regulations require maintaining ACM and suspect ACM in good condition and, prior to any repair, renovation or demolition, inspection/sampling by a New York State-certified asbestos inspector to determine whether the project will disturb ACM. Any ACM in an area to be disturbed (and any other ACM subsequently identified) must be removed by a licensed asbestos abatement contractor prior to the renovation or demolition. Any ACM that remains in the building should be managed in good condition in accordance with applicable regulations. Additional requirements, even if no disturbance is planned (e.g., tenant notification, inspections, and abatement), apply to occupied residential buildings.

2.10 Interior Staining/Corrosion

The interiors of the Property buildings were inaccessible at the time of AKRF's reconnaissance.

2.11 Discharge Features

No discharge features were observed in readily accessible and visible areas of the Property during AKRF's reconnaissance. According to records obtained from the TONH Building Department (see Section 4.2.3), the Property was connected to the Nassau County sewer system by 1982; however, many of the properties in the surrounding area contained cesspools prior to the 1980s. No records indicating the presence or subsequent closure of a cesspool at the Property were identified.

2.12 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were observed in readily accessible and visible areas of the Property during AKRF's reconnaissance.

2.13 Solid Waste Dumping/Landfills

No solid waste dumping/landfills were observed in readily accessible and visible areas of the Property during AKRF's reconnaissance; however, some general refuse and building materials (broken siding, glass, wood, etc.) were noted throughout exterior portions of the Property.

2.14 Stained Soil/Stressed Vegetation

No staining was noted in readily accessible and visible areas of the Property during AKRF reconnaissance. No evidence of stressed vegetation was observed during AKRF's reconnaissance; however, the majority of vegetation was in a period of winter dormancy.

2.15 Wells

No wells were observed in readily accessible and visible areas of the Property during AKRF's reconnaissance.

2.16 Utilities

The status of utility connections at the Property are currently unknown; however, the surrounding area is serviced by Public Service Enterprise Group (electricity), National Grid (natural gas), Westbury Water District (potable water), and Nassau County (sewer system).

2.17 Waste Management and Chemical Handling

Some general refuse and building materials (broken siding, glass, wood, etc.) were noted throughout exterior portions of the Property. No evidence of chemical handling was observed in readily accessible and visible areas of the Property during AKRF's reconnaissance.

2.18 Radon

Radon is a colorless, odorless gas most commonly produced by the radioactive decay of certain rocks. Nassau County is located in Federal EPA Radon Zone 3, which indicates that the average indoor radon level is less than 2 picocuries/Liter (pCi/L). According to data published by the New York State Department of Health (NYSDOH) in November 2021, the average level of radon found in basements and first floors in Nassau County was 1.49 and 0.75 pCi/L, respectively. As these numbers are below the USEPA recommended action level of 4.0 pCi/L, radon is not likely to be a concern at the Property.

2.19 Wetlands

Wetlands were not observed on or immediately adjacent to the Property during AKRF's reconnaissance or the review of readily available records.

2.20 Microbial Contamination (Mold)

No evidence of suspect mold was observed in readily accessible and visible areas of the Property during AKRF's reconnaissance; however, mold may be present in inaccessible locations of the Property buildings.

AKRF's reconnaissance did not constitute and cannot substitute for a mold survey, which includes comprehensive inspection and material sampling with laboratory testing. The interiors of the Property buildings were inaccessible during AKRF's reconnaissance; however, damaged building materials were observed on the residence and garage, which may provide a pathway for water intrusion that could result in mold growth.

3.0 ADJACENT LAND USE

The Property was located in a suburban area in the Hamlet of New Cassel, NY, and was bounded to the north, south, and west by single-family residences, and to the east by Sheridan Street, followed by single-family residences. The area surrounding the Property was primarily residential and commercial, with some educational, industrial, and recreational uses. The Port Jefferson branch of the Long Island Rail Road (LIRR) was located approximately 530 feet south of the Site, with a commercial/industrial park situated beyond the LIRR tracks.

4.0 PROPERTY HISTORY AND RECORDS REVIEW

4.1 Prior Ownership and Usage

4.1.1 Historical Sanborn Fire Insurance Maps

Historical Sanborn fire insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property. Specifically, Sanborn maps from 1920, 1929, 1941, 1968, and 1980 were reviewed. Copies of the Sanborn maps are provided as Appendix C.

1920

The Property consisted of undeveloped land in the northeastern portion of a largely undeveloped block.

The surrounding area was sparsely developed with apparent residential and/or commercial uses. The south-adjacent parcel was developed with a two-story residence with a detached ancillary building. The Property block and the blocks to the north, east, and west were sparsely developed with private residences, some of which included detached garages and/or unspecified ancillary buildings. The LIRR was shown approximately 530 feet south of the Property, across Railroad Avenue.

<u> 1929 – 1941</u>

The Property was developed with a one-story residence with a cellar and a detached garage by 1929; an addition was constructed in the southwestern portion of the residence prior to 1941. The footprints of the buildings were generally consistent with the footprints observed during AKRF's reconnaissance by 1941.

The surrounding area was moderately developed with apparent residential and/or commercial uses. No other significant changes from the 1920 Sanborn map were noted in the surrounding area.

1968 - 1980

No significant changes from the 1941 Sanborn map were noted at the Property.

The surrounding area was densely developed, primarily with apparent residential, commercial, and/or industrial uses. The Property block and the blocks to the north, east, and west were densely developed with private residences, some with detached garages and/or unspecified ancillary buildings. No other significant changes from the 1941 Sanborn map were noted in the surrounding area.

Summary

Historical Sanborn maps indicated that the Property was developed with a one-story residence with a cellar and a detached garage by 1929; an addition was constructed in the southwestern portion of the residence prior to 1941. The footprints of the Property buildings have remained generally consistent with the footprints observed during AKRF's reconnaissance since at least 1941. The surrounding area was sparsely developed by 1920 and was subsequently more densely developed, primarily with residential, commercial, and industrial uses. Notable nearby land uses included the railroad operations approximately 530 feet south of the Property.

4.1.2 Historical Topographic Maps

Historical topographic maps were reviewed for indications of land uses on and near the Property. Specifically, topographic maps from 1897, 1898, 1899/1900, 1903, 1947, 1954/1955, 1967/1969, 1979, 1994, 2013, 2016, and 2019 were reviewed. Copies of the topographic maps are provided as Appendix D.

1897 - 1900

The Property consisted of undeveloped land in the northeastern portion of a largely undeveloped block. The Property elevation appeared to be generally flat; however, numerical contour elevation measurements were not provided on the map.

The surrounding area was sparsely developed with apparent residential, commercial, and/or industrial uses. The LIRR was shown approximately 530 feet south of the Property.

1903

The 1903 topographic map did not provide coverage for the Property or the immediate surrounding area to the north, south, east, or west.

No significant changes from the 1900 topographic map were noted in the areas where coverage was provided (over one-half mile south of the Property).

1947 - 2019

The Property appeared similar to the 1900 topographic map; however, numerical contour elevation measurements indicated that the Property elevation was approximately 120 feet above mean sea level, consistent with its current elevation. The extent of development was not depicted on the topographic maps; however, the Property was shaded pink on the 1954/1955 through 1979 topographic maps, indicating unspecified urban development.

The surrounding area was moderately developed with apparent residential, commercial, and/or industrial uses. The surrounding area was shaded pink on the 1954/1955 through 1994 topographic maps, indicating unspecified urban development. A gravel pit was shown approximately 580 feet south of the Property on the 1954/1955 through 1979 topographic maps. The extent of development in the surrounding area was not discernable on the 2013 through 2019 topographic maps, as these features were not depicted on the maps.

Summary

The Property was not shown with specific development features due to the lack of detail on the topographic maps; however, the Property elevation on the 1947 topographic map was approximately 120 feet above mean sea level, consistent with its current elevation. The surrounding area was sparsely developed by 1897 and was subsequently more densely developed, primarily with residential, commercial, and/or industrial uses. Notable nearby land uses included railroad operations approximately 530 feet south of the Property and a gravel pit approximately 580 feet south of the Property.

4.1.3 Historical Aerial Photographs

Historical aerial photographs were reviewed for indications of land uses or development on or near the Property. Specifically, aerial photographs from 1938, 1947, 1951, 1953, 1962, 1966, 1974, 1980, 1985, 2006, 2009, and 2017 were reviewed. Copies of the aerial photographs are provided as Appendix E.

1938

The Property was developed with an apparent residence and a detached garage.

The surrounding area was sparsely developed with apparent residential, commercial, and/or industrial uses. The Property block and the blocks to the north, east, and west were moderately developed with apparent residential, commercial, and/or industrial uses. Railroad tracks were located approximately 530 feet south of the Property, with largely undeveloped, partially vegetated land shown further south.

1947 - 2017

An addition was shown in the southwestern portion of the apparent residence prior to 1947; the footprints of the Property buildings were generally consistent with the footprints observed during AKRF's reconnaissance.

The surrounding area was more densely developed with apparent residential, commercial, and/or industrial uses as compared to the 1938 aerial photograph. Evidence of ground disturbance was shown approximately 580 feet south of the Property by 1947, with other commercial and/or industrial operations occupying the formerly undeveloped land south of the railroad tracks by the 1950s. Other undeveloped land in the surrounding area was developed with apparent residential and/or commercial uses by the 1950s.

Summary

Historical aerial photographs indicated that the Property was developed with an apparent residence and garage prior to 1938. The footprints of the Property buildings have remained generally consistent with the footprints observed during AKRF's reconnaissance since at least 1947. The surrounding area was moderately developed by 1938 and was subsequently more densely developed, primarily with residential, commercial, and industrial uses. Notable nearby land uses included railroad operations approximately 530 feet south of the Property and other apparent commercial and/or industrial operations south of the railroad tracks.

4.1.4 Property Tax Files and Zoning Records

Based on the Nassau County Land Records information, the Property was categorized as a one family year-round residence and is zoned for residential use. Land records are included in Appendix F.

4.1.5 Recorded Land Title Records

Copies of title records were not provided to AKRF for review. A review of computerized Nassau County Clerk's Office records, which included records of financial transactions involving the Property, identified no environmental liens or use restrictions for the Property. No specific deed information for the Property (or other records indicating the ownership history) was available in the computerized Nassau County Clerk's Office records.

4.1.6 City Directories

A review of historical city directories was conducted dating back to 1972. Various residential listings were identified at the Property between 1982 and 2017. Copies of the city directories are included as Appendix G.

4.2 Regulatory Review

The regulatory database report, provided in Appendix H, was obtained from Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. It includes summaries of the databases searched, their radii around the Property, and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

4.2.1 Federal

The federal databases searched included the National Priority List (NPL); Delisted NPL; Superfund Enterprise Management System [SEMS, formerly Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)], including Superfund Enterprise Management System Archive (SEMS-ARCHIVE); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); and Federal Institutional Control/Engineering Control Registries. The federal listing of facilities that are subject to corrective action under the Resource Conservation and Recovery Act (RCRA) Corrective Action Reports (CORRACTS) is discussed with the state databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially affecting property values.

The Property was not listed in the NPL database. One NPL site (the New Cassel/Hicksville Groundwater Contamination site) was listed within one mile of the Property. Based on its location and assumed hydraulic relationship, the listed NPL site was not anticipated to have significantly affected subsurface conditions at the Property. Details for the listed NPL site are included in Appendix H.

Delisted National Priority List (NPL Deletions)

This database describes former NPL sites that are removed from the NPL list by the USEPA. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria used by the USEPA to delist sites where no further federal response is needed.

Neither the Property nor any other sites within one mile of the Property were listed in the Delisted NPL database.

<u>Superfund Enterprise Management System (SEMS), including Superfund Enterprise</u> <u>Management System Archive (SEMS-ARCHIVE)</u>

The SEMS [formerly Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)] list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP), currently known as SEMS-ARCHIVE sites, are also included in this database. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and EPA has determined no further steps will be taken to list the site on

the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time

Neither the Property nor any other sites within one-half mile of the Property were listed in the SEMS or SEMS-ARCHIVE databases.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The Property was not listed in the ERNS database.

Toxic Chemical Release Inventory System (TRIS)

The TRIS list contains information reported to the USEPA and/or NYSDEC by a variety of industries on their annual estimated releases of certain chemicals to the environment. The TRIS was mandated by Title III of the Superfund Amendments and Reauthorization Act (SARA) of 1986. Available information includes the maximum amount of chemicals stored on-site; the estimated quantity emitted into the air, discharged into bodies of water, injected underground, or released to land; methods used in waste treatment and their efficiency; and data on the transfer of chemicals off-site

Neither the Property nor any other sites within one-eighth mile of the Property were listed in the TRIS database.

Federal Institutional Control/Engineering Control Registries

These registries are listings of sites with engineering and institutional controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Neither the Property nor any other sites within one-half mile of the Property were listed in the Federal Institutional Control/Engineering Control Registries database.

4.2.2 State

The state databases reviewed included petroleum and hazardous material spills (SPILLS) and Leaking Storage Tanks (LTANKS); RCRA Notifiers; Chemical Bulk Storage (CBS); Solid Waste Facilities/Landfill Sites (SWF/LF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); State Hazardous Substance Waste Disposal Sites (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); Brownfield Cleanup Program (BCP); and Registered Dry Cleaners. Proprietary databases maintained by Environmental Data Resources (EDR) that list Historic Cleaners, Historic Auto Sites, and Manufactured Gas Plant Sites also were reviewed.

New York State Spills Information Database (NY Spills) / Leaking Storage Tank Incidents Reports (LTANKS)

The NY Spills database includes a list of releases reported to the NYSDEC, including those attributed to tank test failures and tank failures (LTANKS). The tank test failures list only covers tanks that are below ground, while the tank failures list includes those that are either below or above ground. This database also lists spills that occur during the transportation of chemicals.

The Property was not listed in the NY Spills database. A total of 208 spill sites were listed within one-half mile of the Property, including 185 NY Spills and 23 LTANKS. Based on its location, assumed hydraulic relationship, and listing details, the following spill site has some limited potential to affect subsurface conditions at the Property:

• In February 2001, Spill No. 0011983 was reported at 746 Broadway, located north-adjacent to the Property. According to the listing, petroleum-contaminated soil was identified following the removal of a 550-gallon UST; however, no information regarding the nature of the release or the actions taken to address the conditions were provided in the listing. The NYSDEC closed Spill No. 0011983 in October 2002.

Based on their locations, assumed hydraulic relationships, and/or listing details, the remaining listed spill sites were not anticipated to have significantly affected subsurface conditions at the Property. Details for all listed spill sites are included in Appendix H.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

The NYSDEC's Bureau of Hazardous Waste Facility Compliance regulates hazardous waste from the point of generation to the point of disposal. The identified sites tracked on this list are those which have filed notification forms in accordance with RCRA requirements regarding their hazardous waste activity. These sites include treatment, storage and disposal facilities (TSDs); small-quantity and large-quantity generators; and transporters of hazardous waste regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA

The Property was not listed in the RCRA or CORRACTS databases. Two CORRACTS sites were listed within one mile of the Property. Based on their locations, assumed hydraulic relationships, and/or listing details, the listed CORRACTS sites were not anticipated to have significantly affected subsurface conditions at the Property. Details for the listed CORRACTS sites are included in Appendix H.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

Neither the Property nor any other facilities within one-eighth mile of the Property were listed in the CBS database.

Solid Waste Facilities/Landfill Sites (SWF/LF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

The Property was not listed in the SWF/LF database. Thirteen SWF/LF sites were listed within one-half mile of the Property. Based on their locations, assumed hydraulic relationships, and/or listing details, the listed SWF/LF sites were not anticipated to have

significantly affected subsurface conditions at the Property. Details for the listed SWF/LF sites are included in Appendix H.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Neither the Property nor any other facilities within one-eighth mile of the Property were listed in the PBS database.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This database (also known as State Superfund) maintains information and aids decision-making regarding the investigation and clean-up of hazardous sites. The Registry's information includes the clean-up status, type of clean-up, types and quantities of contaminants involved, and the assessment of health and environmental concerns. SHWS records are the state's equivalent to CERCLIS. These sites may or may not also be listed on the federal CERCLIS list.

The Property was not listed in the SHWS database. Twenty-seven SHWS sites were listed within one mile of the Property. Based on their locations, assumed hydraulic relationships, and/or listing details, the listed SHWS were not anticipated to have significantly affected subsurface conditions at the Property. Details for the listed SHWS sites are included in Appendix H.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks waste disposal sites that may pose threats to public health or the environment that cannot be remediated using monies from the Hazardous Waste Remediation Fund. The database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

Neither the Property nor any other sites within one-half mile of the Property were listed in the SHSWDS database.

Major Oil Storage Facilities (MOSF) Database

These facilities may be on-shore facilities or vessels with petroleum storage capacities of 400,000 gallons or more.

Neither the Property nor any other facilities within one-eighth mile of the Property were listed in the MOSF database.

Environmental Restoration Program (ERP)

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Neither the Property nor any other facilities within one-half mile of the Property were listed in the ERP database.

Voluntary Cleanup Program (VCP)

The VCP is a NYSDEC program for investigation and remediation of (generally) privatelyowned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether-contamination is present.

The Property was not listed in the VCP database. One VCP site (Former Laka Industries, Inc.) was listed within one-half mile of the Property. Based on its location and assumed hydraulic relationship, the listed VCP site was not anticipated to have significantly affected subsurface conditions at the Property. Details for the listed VCP site are included in Appendix H.

Brownfield Cleanup Program (BCP)

In 2003, a New York State law established this successor to the Voluntary Cleanup Program. In addition to liability releases, it established a variety of tax credits for sites remediated through the program. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

Neither the Property nor any other sites within one-half mile of the Property were listed in the NYSDEC BCP database. Five US Brownfield sites were listed within one mile of the Property; however, based on their distance from the Property, the listed US Brownfield sites were not anticipated to have significantly affected subsurface conditions at the Property. Details for the listed US Brownfield sites are included in Appendix H.

Registered Dry Cleaners/EDR Historic Cleaners

The Registered Dry Cleaners and EDR Historic Cleaners databases were researched to identify listings for the Property and facilities within the ASTM-defined radii.

Neither the Property nor any other facilities within their respective search radii of the Property were listed in the Registered Dry Cleaners/EDR Historic Cleaners databases.

EDR Historic Auto Sites

The EDR Historic Auto database was researched to identify listings for the Property and facilities within one-eighth mile of the Property.

Neither the Property nor any other facilities within one-eighth mile of the Property were listed in the EDR Historic Auto Sites database.

EDR Manufactured Gas Plant (MGP) Sites (Coal Gas)

The EDR manufactured gas plant (MGP) database was researched to identify listings for the Property and facilities within one mile of the Property.

Neither the Property nor any other facilities within one mile of the Property were listed in the EDR MGP Sites database.

4.2.3 Local Agency File Review

Town of North Hempstead (TONH) Building Department

AKRF sent a Freedom of Information Law (FOIL) request pertaining to environmental records to the TONH Building Department on February 18, 2022. In a response dated February 25, 2022, the TONH provided the following pertinent records:

• A 1940 permit for the construction of an addition on the southwestern portion of the residence.

- A 1948 permit for an addition on the garage.
- A 1953 certificate of compliance for the installation of an oil burner.
- A 1982 permit and associated certificate of approval to connect the Property to the Nassau County sewer system.

Nassau County Department of Health (NCDOH)

AKRF sent a FOIL request pertaining to environmental records to the NCDOH on February 18, 2022. As of the date of this report, the NCDOH has not issued a response. If issues of potential concern are identified upon receipt of a response, an addendum to this report will be prepared to discuss relevant findings.

Nassau County Fire Commission (NCFC)

AKRF sent a FOIL request pertaining to environmental records to the NCFC on February 18, 2022. In a response dated February 22, 2022, the NCFC indicated that there were no records pertaining to the request. If response records of potential concern are provided in the future, an addendum to this report will be prepared to discuss relevant findings.

New York State Department of Environmental Conservation (NYSDEC)

AKRF sent a FOIL request pertaining to environmental records to the NYSDEC on February 18, 2022. In a response dated March 4, 2022, the NYSDEC indicated that there were no records pertaining to the request. If response records of potential concern are provided in the future, an addendum to this report will be prepared to discuss relevant findings.

New York State Department of Health (NYSDOH)

AKRF sent a FOIL request pertaining to environmental records to the NYSDOH on February 18, 2022. In a response dated March 17, 2022, the NYSDOH indicated that a diligent search of their files produced no records pursuant to the request. If issues of potential concern are identified upon receipt of a response, an addendum to this report will be prepared to discuss relevant findings.

Local records are included in Appendix F.

4.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; useful, accurate and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

AKRF searched for the Property addresses on the NYSDEC's DECinfo Locator Map, on February 28, 2022. According to the map, the Property is serviced by a municipal separate storm sewer system (MS4) and is located in a potential Environmental Justice area.

AKRF also reviewed available Google Maps Street View images of the Property. The September 2012 image (the only available image) showed the one-story residence in what appeared to be fair condition (no evidence of damage or boarded doors/windows), with several vehicles parked in the asphalt-paved driveway.

In AKRF's judgment, no further additional local records meeting the ASTM criteria are pertinent for the Property or any adjoining properties, and a review of additional records would not likely add significant pertinent information or affect the conclusions of this report.

5.0 USER-PROVIDED INFORMATION

In preparing the Phase I ESA, AKRF requested that the client provide any pertinent information regarding the Property, specifically:

- The reason for performing the Phase I ESA;
- Whether they were aware of any pertinent current or historic activities at or near the Property, including but not limited to: hazardous substances or petroleum, waste management practices, filling or disposal drains, septic/sewer systems, and potable and non-potable wells;
- Owner and occupant information and whether they were aware of any previous Phase I ESAs or other potentially pertinent reports, plans or information;
- Whether any *environmental liens* or *activity and land use limitations* are in place or filed or recorded against the Property or whether there was pending, threatened, ongoing or past violations, litigation or enforcement action relevant to hazardous substances or petroleum products;
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of the chemicals used by this type of business);
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated; and
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property including current/past uses of the Property and adjacent properties.

Mr. Neal Stone of the TONH, a representative for the User, answered the above questions by completing an ASTM E-1527 User Questionnaire. Mr. Stone was not aware of: outstanding environmental violations; litigation or administrative proceedings in connection with environmental issues; environmental liens or use restrictions; or value reduction due to environmental issues at the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. A copy of the User Questionnaire is provided in Appendix B.

6.0 PREVIOUS STUDIES

No previous studies were provided to AKRF for review.

7.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The interior of the one-story residence and detached wooden garage were not accessible during AKRF's reconnaissance. The improper use and/or storage of petroleum products and chemicals in inaccessible portions of the Property may have affected subsurface conditions; however, AKRF does not believe that this represents a significant data gap likely to result in additional or significantly altered recognized environmental conditions or conclusions.
- Interviews and user-provided information were limited to those discussed in Section 5.0 and included interviews with representatives of the TONH, only. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property; and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly altered recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the Property and surrounding area could be obtained from the historical Sanborn maps, topographic maps, aerial photographs, city directories, and local records, and this data gap is not likely to result in additional or significantly altered recognized environmental conditions or conclusions.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 4.2), as well as FOIL requests submitted to the TONH, NCDOH, NCFC, NYSDEC, and NYSDOH. AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property. Additional reviews beyond this are not warranted and would not likely result in additional or significantly altered recognized environmental conditions or conclusions.

8.0 CONCLUSIONS

AKRF, Inc. (AKRF) was retained by the Town of North Hempstead (TONH, the "user" or "client") to prepare a Phase I Environmental Site Assessment (ESA) of the property located at 243 Sheridan Street in the Hamlet of New Cassel, NY (the "Property"). The approximately 6,000-square foot (sf) Property was defined on the Nassau County Tax Map as Section 11, Block 44, Lot 74. A map showing the location of the Property is provided as Figure 1.

At the time of AKRF's reconnaissance, the Property contained a one-story, single-family residence with a cellar, a detached garage, and exterior paved and landscaped areas. Historically, the Property was developed with a one-story residence with a cellar and a detached garage by 1929; an addition was constructed in the southwestern portion of the residence prior to 1941. The footprints of the Property buildings have remained generally consistent with the footprints observed during AKRF's reconnaissance since at least 1941. The area surrounding the Property was primarily residential and commercial, with some educational, industrial, and recreational uses.

This Phase I ESA was performed in conformance with American Society for Testing and Materials (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice (the "Standard"), thereby satisfying United States Environmental Protection Agency (USEPA) "Standards and Practices for All Appropriate Inquiries (AAI); Final Rule" [40 Code of Federal Regulations (CFR) Part 312] Federal Register Vol. 70, No. 210, November 1, 2005. Any exceptions to, or deletions from, the Standard are described in Section 7.0. The Phase I ESA was also prepared in accordance with RFP No. TNH225-2019 between AKRF and TONH Department of Planning and Environmental Protection. A Brownfields Property Approval form for Petroleum Contamination was reviewed and approved by USEPA Region 2 on January 31, 2022 as part of Grant Number BF-9649919

A summary of the assessment findings is presented below:

Historic Recognized Environmental Condition (HREC)

• No HRECs were identified.

Controlled Recognized Environmental Condition (CREC)

• No CRECs were identified.

Recognized Environmental Conditions (RECs)

- Suspected fill and vent piping potentially associated with a current or former petroleum storage tank were observed protruding from the foundation wall in the southwestern portion of the residence, adjacent to the front door. According to records obtained from the TONH Building Department, a certificate of compliance associated with the installation of an oil burner at the Property was issued in 1953.
- The Property was connected to the Nassau County sewer system by 1982; however, many of the properties in the surrounding area contained cesspools prior to the 1980s. No records indicating the presence or subsequent closure of a cesspool at the Property were identified.
- A spill incident (Spill No. 0011983) was reported at 746 Broadway, located north-adjacent to the Property. According to available information, petroleum-contaminated soil was identified following the removal of a 550-gallon UST; however, no detail regarding the nature of the release or the actions taken to address the conditions were identified.

Business Environmental Risks [items outside the scope of ASTM E1527-13 such as asbestos-containing material (ACM), lead-based paint (LBP), lead-containing paint (LCP), and/or polychlorinated biphenyls (PCBs) in building materials or fill/debris

- A mound of potential fill material from an unknown source was observed in the southwestern portion of the Property.
- There is a potential for the presence of ACM, LBP/LCP, PCB-containing material, and/or mercury-containing material in the Property buildings, historic fill material, buried structures, and/or buried demolition debris at the Property.
- There is a potential for the presence of water damage and mold within the Property buildings.

De Minimis Conditions

• Some general refuse and building materials (broken siding, glass, wood, etc.) were noted throughout exterior portions of the Property.

9.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Deborah Shapiro, QEP Senior Vice President Timothy McClintock
Technical Director

10.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

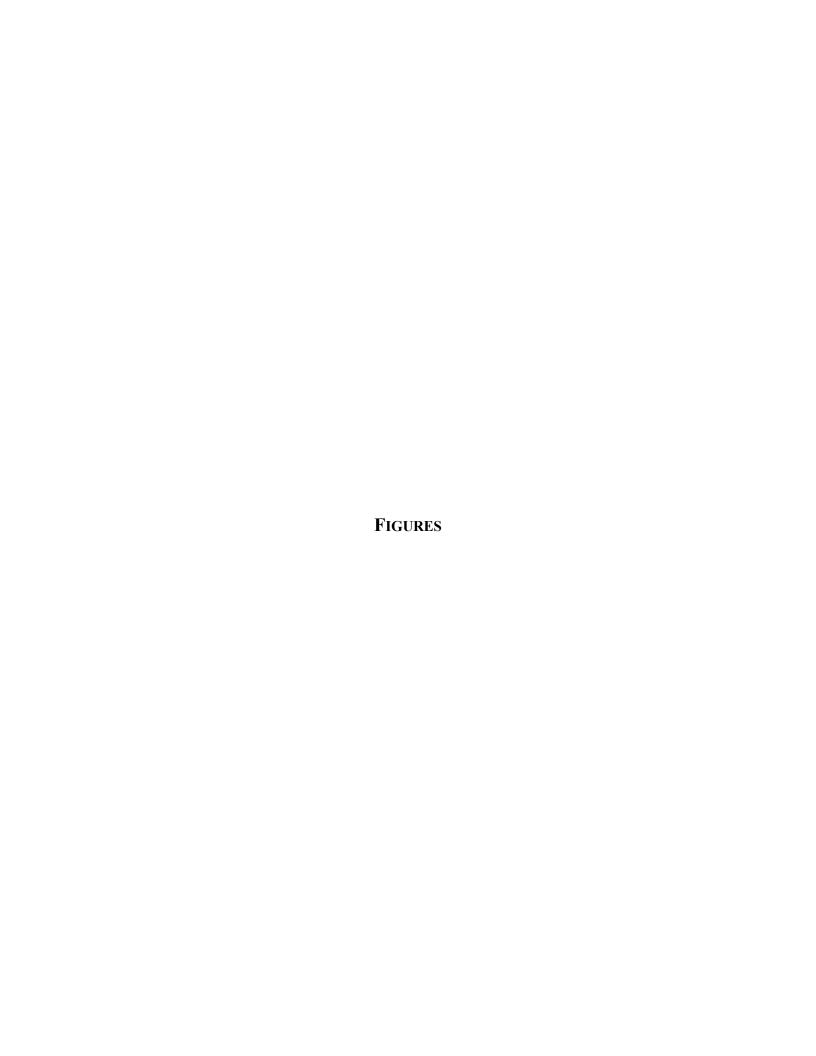

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 7.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

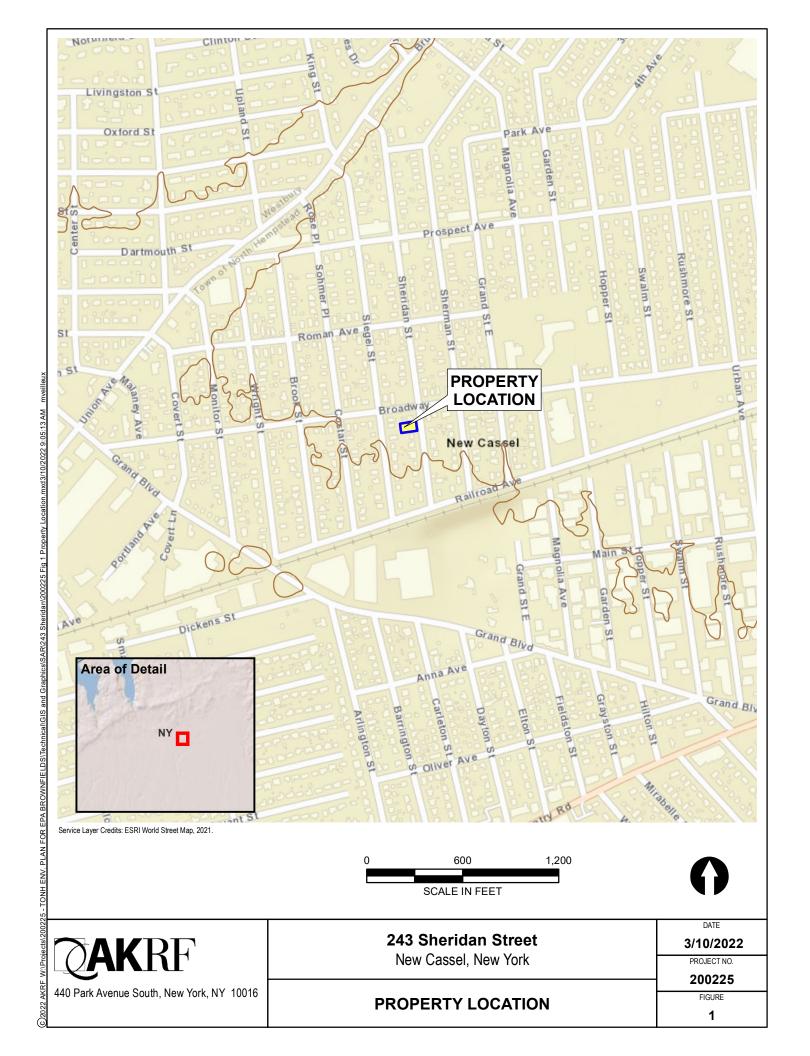

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than by the Town of North Hempstead, and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

APPENDIX B USER QUESTIONNAIRE

<u>Environmental Site Assessment – Site Questionnaire</u> 243 Sheridan Street, New Cassel, NY 11590

Please answer all questions to the best of your knowledge to support the findings of the Phase I Environmental Site Assessment (ESA) for the 243 Sheridan Street in New Cassel, NY (the Property). Please call with any questions or comments.

	KRF Contact: Deborah Shapiro ell phone: (646) 388-9544
Pe	rson completing questionnaire: Neal Stone
Re	elationship to the Property: Planning Department employee for governing jurisdiction
Le	ngth of time associated with the Property: N/A
1.	Please provide:
	• The reason why the Phase I ESA is being performed. The property contains an abandoned residential structure, which may contain asbestos and lead-based paint. This would require proper disposal and remediation before the property gets redeveloped and/or reused.
	• The type of property and type of property transaction (for example, sale, purchase, exchange, refinancing, etc.). The property is considered to be low density residential, and is entirely within a low density residential neighborhood.
	• The complete and correct address for the Property (a map or other documentation showing the Property location and boundaries is helpful). 243 Sheridan Street. Section 11, Block 44, Lot 74. (Nassau County Department of Assessment Land & Tax Map is attached.)
2.	Please provide information regarding the history of the Property, including past uses, deeds, sale/purchase prices, etc. $\ensuremath{\mathrm{N}/\mathrm{A}}$
3.	If the property is undergoing a transaction, does the purchase price being paid for the Property reasonably reflect the fair market value of the Property?
	Yes □ No ■ N/A
	If you conclude that there is a difference, are you aware of whether the lower purchase price is because of an environmental issue or contamination that is known or believed to be present at the Property?
4.	Are you aware of any former studies that have been conducted at the Property, including: geotechnical

surveys, environmental site assessment reports, spill investigations/remediation reports, asbestos or lead abatement, former or current environmental permits, licenses, audits, investigations, community

<u>Environmental Site Assessment – Site Questionnaire</u> 243 Sheridan Street, New Cassel, NY 11590

right-to-know plans, safety plans, preparedness and prevention plans, spill prevention plans, countermeasure or control plans, or other documentation or correspondence concerning the Property. If yes, please provide copies.

□ Y	Yes	■ No
	use r	you aware of any environmental liens or activity use limitations (such as engineering controls, land estrictions, or institutional controls) that are in place at the Property and/or have been filed or ded against the Property under federal, tribal, state, or local law?
□ Y	Yes	■ No
	that p any c envir	d on your knowledge and experience related to the Property, are there any other obvious indicators point to the presence or likely presence of releases or contamination at the Property? Please provide commonly known or reasonably ascertainable information about the Property that would help the conmental professional identify conditions indicative of contamination, releases, or threatened ses. For example:
	•	Are you aware of any spills or other chemical releases that have taken place at the Property?
□ Y	Yes	■ No
	•	Are you aware of any cleanups that have taken place at the Property?
□ Y	Yes	■ No
	•	Are you aware of any specific chemicals or petroleum products that are currently present or once were present at the Property?
□ Y	Yes	■ No
	•	Are you aware of any former or current chemical or fuel oil storage, including storage tanks, chemical/pesticide/herbicide use, etc., at the Property?
□ Y	Yes	■ No

<u>Environmental Site Assessment – Site Questionnaire</u> 243 Sheridan Street, New Cassel, NY 11590

Are you aware of the presence of any historic fill, construction and demolition debris, ash,

		dredge spoils, etc.?
	Yes	■ No
7.		se provide any information you have on former and/or current buildings, utilities, and operations, ding past and present: N/A
	•	Water:
	•	Electric:
	•	Gas/fuel oil:
	•	Heating and cooling systems:
	•	Sewer or septic/cesspool:
	•	Trash collection:
	•	Hazardous materials storage or use (paint, solvent, pesticides, herbicides):
	•	Construction/demolition date(s):
	•	Surveyed drawings, blueprints, subsurface studies, renovation/addition details, etc.:
8.	Pleas	se advise whether you are aware of the following:
	•	Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Property
	Yes	■ No
	•	Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Property
	Yes	■ No
	•	Any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous materials at the Property.
	Yes	■ No

Environmental Site Assessment – Site Questionnaire 243 Sheridan Street, New Cassel, NY 11590

9.	Do you have any specialized knowledge or experience related to the Property or nearby properties? For
	example, are you involved in the same line of business as the current or former occupants of the
	Property or an adjoining property so that you would have specialized knowledge of the chemicals and
	processes used by this type of business?

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

CERTIFICATE OF OCCUPANCY

1. New building. No building hereafter erected, enlarged, extended or altered shall be occupied or used, in whole or in part, until a certificate of occupancy, certifying that such building conforms to the approved plans and the requirements of this code and stating the purpose for which the building may be used in its several parts, and any special stipulations, shall have been issued by the Building Inspector and signed by him or his authorized assistant. If the occupancy or use of a building is not discontinued during the work of alteration, the occupancy or use of the building shall not continue for more than thirty days after the completion of the alteration unless a certificate shall have been issued.

2. Change of occupancy.

- (a) No change or use shall be made in a building hereafter erected or altered that is not consistent with the last issued certificate of occupancy for such building unless a permit is secured. In case of an existing building, no change of occupancy that would bring it under some special provision of this ordinance shall be made unless the Building Inspector, upon inspection, finds out that such building conforms substantially to the provisions of this ordinance with respect to the proposed new occupancy and use, and issues a certificate of occupancy therefor.
- (b) The reestablishment in a building, after a change of occupancy has been made, of a prior use that would not have been permitted in a new building of the same type of construction is prohibited. The change from a specifically prohibited use to another specifically prohibited use shall not be made.

NO WORK TO BE STARTED UNTIL PERMIT HAS BEEN RECEIVED

INSTRUCTIONS

- a. This application is to be made out in triplicate, in ink or typewritten, and submitted with two complete sets of plans drawn to a uniform scale, including plumbing elevations, record for Department of Assessments, and fees. A separate plot plan in duplicate, drawn to a scale of not less than 20 feet to the inch, shall either be included in the building plans or submitted on a separate plot diagram furnished by the Building Department. Such plot plan shall show block and lot numbers, existing and proposed buildings or extensions to buildings, with distances of same from the lot and street lines, names of all streets and distances from plot to nearest intersecting streets.
 - b. No application will be accepted unless complete with all questions answered or noted.
- c. When the application is approved it becomes a permit and must be kept on the premises with approved set of plans until completion of the work authorized therein.

APPLICATION IS HEREBY MADE to the Building Official of the Town of North Hempstead for the approval of the detailed statement and plans herewith submitted for the construction herein described.

	DEFINITI	UNS III		
"Alteration", as applied to a	building or structu	re, means a cha	nge or rearra	ingement in the

"Alteration", as applied to a building or structure, means a change or rearrangement in the structural parts or in the exit facilities; or an enlargement, whether by extending on any side or by increasing in height; or the moving from one location or position to another; the term "Alter" in its various modes and tenses and its participle forms, refers to the making of an alteration.

various modes and tenses and its participle forms, refers to the making of an alteration.

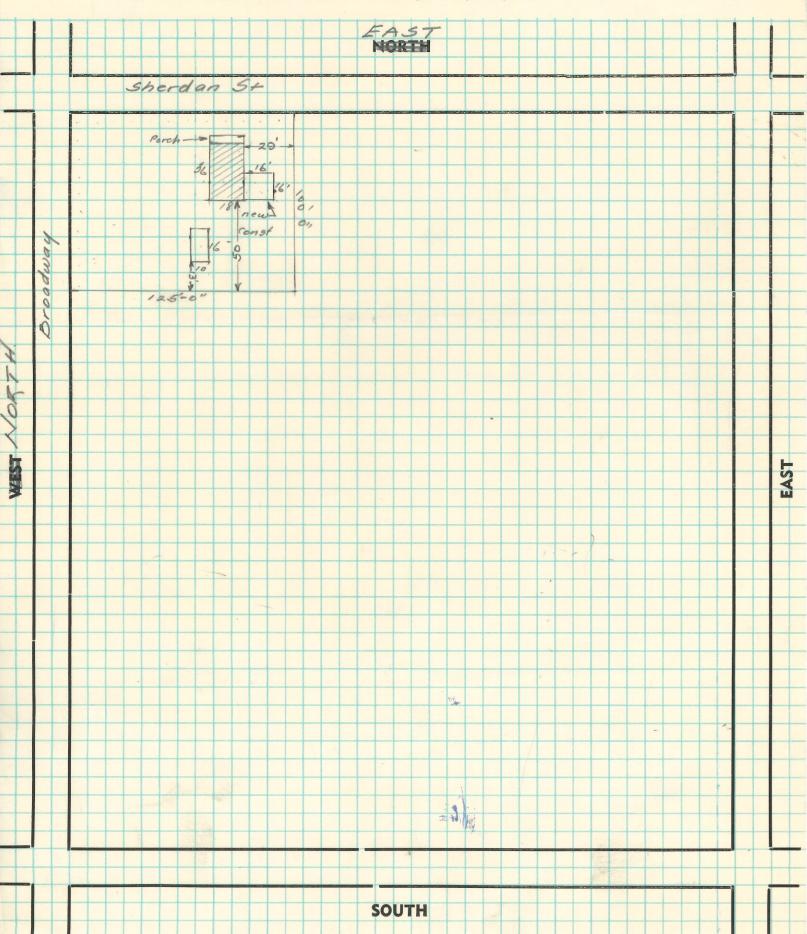

"Repair" means the replacement of existing work with the same kind of materials used in the existing work not including additional work that would affect the structural safety of the building, or that would affect or change required exit facilities, or that would affect a vital element of an elevator, plumbing, gas-piping, wiring or heating installation, or that would be in violation of a provision of law or ordinance.

Nassau County FOIL Request Fire Commission - Hazardous Materials Division

Dear Tim McClintock,

Regarding your Freedom of Information Law ("FOIL") request (Reference # 220238):

Please be advised that this Office has diligently searched our records and have not found any documents responsive to your request.

If you believe this request was improperly denied or the response is incomplete you have the right to appeal.

Appeals must be submitted in writing within thirty (30) days to the FOIL Appeals Officer, located at 1 West Street, Mineola, NY 11501. See Public Officers Law 89(4)(a). Please include a copy of this response along with a copy of your original request with your appeal.

Thank you.

RE: PUBLIC RECORDS REQUEST of 2/18/2022, Reference # W096618-021822

Date: 03/04/2022

Dear Environmental Scientist Timothy McClintock,

I write in response to your Freedom of Information Law (FOIL) request seeking:

Phase I ESA - 243 Sheridan Street, Westbury, NY 11590 (Section 11, Block 44, Lot 74)

Phase I ESA - 243 Sheridan Street, Westbury, NY 11590 (Section 11, Block 44, Lot 74) All environmental records pertaining to underground storage tanks (USTs), above ground storage tanks (ASTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities at 243 Sheridan Street, Westbury, NY 11590 (Section 11, Block 44, Lot 74). Alternate address: 243 Sheridan Street, New Cassel, NY 11590 (Section 11, Block 44, Lot 74)

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. If I can be of further assistance, please contact me at 631 444-0202 and reference FOIL #W096618-021822, or simply reply to this email. Thank you.

Sincerely,

Region 1 FOIL Coordinator

Governor

KRISTIN M. PROUD
Acting Executive Deputy Commissioner

March 17, 2022

Timothy McClintock AKRF, Inc. 34 South Broadway, Suite 300 White Plains, NY 10601

FOIL #: 22-02-423

Dear Timothy McClintock:

This letter responds to your Freedom of Information Law (FOIL) request of February 18, 2022, in which you requested environmental records pertaining to "243 Sheridan Street, Westbury, NY 11590."

Please be advised that after conducting a diligent search, no records responsive to your request have been located.

The address is served by the Westbury WD public water system, (NY2902856). Any violation reports for the public water system can be found at the following link:

http://www.health.ny.gov/environmental/water/drinking/violations/previous compliance reports.

Should you feel that you have been unlawfully denied access to records, you may appeal such denial in writing within 30 days to the Records Access Appeals Officer, Division of Legal Affairs, Empire State Plaza, 2438 Corning Tower, Albany, New York 12237-0026.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Rosemarie Hewig

Rosemarie Hewig, Esq. Records Access Officer

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Brad street. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2020 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
NEW CASSEL/HICKSVILL Cerclis ID:: 203974	SOUTHERN END OF IRIS	SE 1/2 - 1 (0.720 mi.)	242	566
EPA Id: NY0001095363				

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/06/2022 has revealed that there are 27 NY SHWS sites within approximately 1 mile of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there are 12 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

Hazardous Waste Summary:

Waste Code: D001

Waste Description: IGNITABLE WASTE

Waste Code: D011
Waste Description: SILVER

Waste Code: F002

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE,

ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2,

TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

> HAAS 98-174 05/07/98: Fenley & Nicol called DEC (Haas) to inform him they had found what appeared to be a recent surface spill. 05/11/98 (A): Received 7May98 letter from F&N- were on site 7May [while checking wells for Spill 8808676 here?] and noticed what appeared to be an overfill of the tank. 05/11/98 (B): The spill appeared to be of ...significant magnitude. The contamination extended at least 1ft below grade. Has photos of the area involved (copies enclosed). 05/11/98 (C): Took a soil sample from this area, a water sample from well 2 by the remediation system, (and a product sample?). As per

discussion of 7May, will have the product sample identified.

10/07/98: DEC letter to North Hempstead Housing Authority- enclose copy of F&N's correspondence. Request cleanup. 02/22/99 (A): DEC

LETTER TO SWEET CLAIMS (IN RESPONSE TO THEIR REQUEST FOR INFO CONCERNING A SPILL ON/ABOUT 17APR98 WHICH RESULTED IN CLAIM CA

565-4864)- enclose documentation. 02/22/99 (B): DEC is requesting that Housing Authority clean up. 02/22/99 (C): State of New York is already seeking reimbursement for Spill 8808676. Contact AG's office for details. 06/18/99: DEC letter to Housing Authority- you have not submitted documentation as to any cleanup. Therefore, DEC will arrange for this. The State will then seek reimbursement plus penalties. 09/07/99 (A): DEC (Haas) inspected site- no cleanup to date. 09/07/99 (B): Remediation equipment for Spill 8808676 has been removed. 09/20/99: DEC letter to Housing Authority- no cleanup to

date. DEC will make arrangements for this... ***SEE ALSO 8808676 (OIL DELIVERED TO U-TUBE), 9008676 (SURFACE SPILL), 9707483 (10K FUEL OIL TANK TEST FAILURE), AND 9913250/9913264 (CONTAMINATION FOUND UPON

REMOVAL OF 10K FUEL OIL TANK)***1

WELL 13 HAD FLOATING PRODUCT. 07/18/89: F&N LETTER- ENCLOSE UPDATED MAPS. 07/19/89: F&N BEGINS INSTALLATION OF RECOVERY SYSTEM. 08/04/89: INSTALLED ORS SCAVENGER PUMPS IN WELLS 1 AND 5. 09/27/89: F&N SERVICES BOTH SCAVENGERS. MOVED ONE FROM WELL 5 TO WELL 2. 12/18/89: HOFMANN LETTER TO F&N- EXAMINE WHY RECOVERY RATE IS SO SLOW. 01/02/90: F&N LETTER- ENCLOSE UPDATED PLUME MAP. RECOMMEND CLEANING AND ADJUSTING HEIGHT OF SCAVENGER (WATER TABLE NOW ABOVE SCAVENGER). 02/09/90: DEC (PARISH, [HOFMANN?]), F&N, ORS ON SITE- ONE SCAVENGER BURNED OUT. WILL ADJUST HEIGHT OF SCAVENGERS. 02/16/90: HOFMANN AND F&N ON SITE- PERFORMED BORING N OF WELLS 12 AND 13 TO DETERMINE CLAY EXTENT. WENT TO 56FT- FOUND BANDS OF CLAY; LARGE CLAY LENSE AT 49-53FT; WATER AT 43FT. HAVE SOIL LOGS. 02/23/90: HOFMANN AND F&N ON SITE- PERFORMED SPLIT SPOON SAMPLE THROUGH WELL 1. HAD TO INSTALL NEW WELL- 1A. REPLACED PUMP ON SCAVENGER AND RESET SAME. 02/28/90: HOFMANN AND F&N ON SITE- REDRILLED WELL 2. WENT TO 53FT. 03/02/90: F&N DEVELOPED WELLS 1A AND 2. 03/16/90: AS PER F&N- PERCHED WATER MAY NOW BE DRAINING?, 03/19/90: F&N INSTALLED NEW SLEEVES ON SCAVENGERS AND ADJUSTED SAME 03/21/90: ALL PUMPS OPERATING. 04/03/90: F&N PULLED SCAVENGERS- MOVED THE ONE IN WELL 2 TO WELL 1; WILL REPAIR THE ONE FROM WELL 1 05/09/90: F&N TO REMOVE ORS PUMPS AND RESUME BAILING. WILL PROPOSE PRODUCT-ONLY EJECTOR SYSTEM. **WAS THIS DONE?***. 05/10/90: F&N PULLED SCAVENGERS AND PREPARED TO INSTALL EJECTORS (THIS IS AS PER THEIR BILL). 05/14/90: ***NOTE: WILL USE A 7.5HP AIR COMPRESSOR FROM STATE RECOVERY ON SOUTHERN STATE PARKWAY IN AMITYVILLE 05/23/90: EJECTORS WERE STARTED. 07/26/90: HOFMANN LETTER TO F&N- REDUCE MONITORING/BAILING FROM WEEKLY TO TWICE PER MONTH. 03/19/92: ***F&N LETTER TO HOFMANN- PRODUCT LEVELS INCREASING. SUSPECT TANK PROBLEM OR DELIVERY SPILL.*** 03/20/92: NCHD SAYS THE TANK IS NOT REGISTERED. WILL ADVISE DEC ON TESTING DATES. 03/23/92: HOFMANN LETTER TO F&N- INCREASE MONITORING/BAILING TO ONCE PER WEEK. TAKE SAMPLE OF PRODUCT FOR ID. 03/26/92 (A): F&N SENDS UPDATED REPORT- 15 WELLS. WELLS 1-3 AND 6 HAD FLOATING PRODUCT ORIGINALLY (1-5.8FT). CURRENTLY .2-3.0FT. GW FLOW IS SW. THE CLAY IS NOT CONTINUOUS OVER SITE (ONLY AROUND WELLS 1 AND 9?). 03/26/92 (B): RECOMMEND TWO MORE PRODUCT-ONLY EJECTORS; MORE SOIL BORINGS TO DETERMINE EXACT EXTENT OF CLAY; VES SYSTEM ON WELLS 1-6; CHEMICAL TREATMENT. HAS UPDATED MAPS. 03/30/92: F&N SAMPLES WELLS 04/02/92: ***PEDNEAULT SENDS RESULTS OF ID- WELL 2 AND THE TANK MATCH. BOTH ARE DIESEL .*** 04/28/92: F&N DISPOSES OF 515GAL (OIL OR OIL/WATER?) 05/06/92: HOFMANN LETTER TO F&N- INSTALL 2 PRODUCT-ONLY EJECTORS. MONITOR TWICE PER MONTH. 05/27/92: F&N PREPARES TO INSTALL THE EJECTORS IN WELL 4 AND 6. (THEREFORE, WELLS 1, 2, 4, AND 6 WILL HAVE PUMPS?). 06/05/92: F&N INSTALLS THE EJECTORS (06/23/92: EJECTORS OPERATIONAL. 07/24/92: F&N DISPOSES OF 253GAL (OIL OR OIL/WATER?) 05/12/93: CURRENT STATUS- 4 PRODUCT-ONLY EJECTORS. FLOATING PRODUCT IN ONE WELL. 1784GAL RECOVERED TO DATE. 07/12/93: DEC (HAAS) MET F&N ON SITE- REQUESTED SOIL BORING SOUTH OF RECOVERY AREA; NEW MONITORING WELL SW OF APARTMENT ENTRANCE; PERFORM PUMP TEST. 07/29/93: F&N INSTALLED ONE WLL AND PERFORMED A TEST BORING TO IDENTIFY THE DEPTH AND THICKNESS OF THE CLAY (THIS IS AS PER THE OCT93 REPORT). 10/19/93: F&N REPORT- RECOMMEND INSTALLING SCAVENGER IS WELL 11. 12/21/93: F&N LETTER- ENCLOSE BIDS FOR GEOPHYSICAL SURVEY. 02/01/94: F&N LETTER- ENCLOSE BIDS FOR VARIOUS PROPOSED GEOPHYSICAL WORK. 07/22/94: F&N SUBMITTED REMEDIATION PROPOSAL- 8 DIA 40GPM RECOVERY WELL WITH OIL/WATER SEPARATOR. FALL94: NEW RECOVERY WELL INSTALLED??? 12/12/94: F&N LETTER- ENCLOSE BIDS FOR ADDITIONAL WORK (INSTALLATION OF 8 MONITORING WELLS, ETC). 03/17/95: F&N LETTER- SPECS FOR PROPOSED

planning to abandon 12k diesel tank on the premises, by NCHD request he did GeoProbe subsurface investigation around the contour of the tank at ~17' b.g., soil sample sent to lab. Olfactory assessment demonstrated loss of product. (VP) 04/12/18 1545hrs: JN received Reliant Consulting Investigation Report 04/26/18 1443hrs: t/c with Chris Thomasello. JN explained more work needs to be performed. The soil need to be delineated down to groundwater and to also take a water sample. JN explained to have multiple points. JN to send an email to require more work. 07/27/18 1833hrs: JN received email from Chris. Attached was the work plan to be performed. 07/31/18 1148hrs: JN replied Chris's email to redo the boring locations and resubmit the work plan 08/30/18 0831hrs: email from Chris. Work to be performed on 09/04 and revised work plan attached 08/31/18 0902hrs:

JN approved work plan 09/04/18 1121hrs: JN onsite. Soil samples were taken every 5 feet. Reliant Environmental to take groundwater sample at each boring. It was noted that there was no floating product/sheen or odor observed from the groundwater sample. Reliant to complete the next to borings. 10/22/18 1306hrs: JN received Investigation report from Reliant Consulting Soil data showed most compounds below unrestricted levels. Groundwater results were below protection of groundwater standards. No further action required. "

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Region: Acres: 0.850 130043S HW Code: Record Add: 11/18/1999 Record Upd: 01/10/2020 Updated By: **RKCORCOR**

Site Description: "Location: The 299 Main Street site is approximately 0.85 acres and

> located in the New Cassel Industrial Area, an urban area of Nassau County, NY. Site Features: The front (Main St.) portion of the site is occupied by a single story building, while the rest of the site is a paved parking lot. Current Zoning and Land Use: The site is zoned Industrial. Past Use of the Site: The property was formerly used as a junkyard and a transportation company. Island Transportation Company (ITC) used trichloroethene (TCE) to wash asphalt residues from its trucks prior to 1980. Past site operations have contaminated groundwater beneath and downgradient of the site with TCE and related compounds. Site Geology and Hydrogeology: The site is underlain by the Upper Glacial Aquifer which consists of poorly sorted sand and gravel to approximately 80 feet below ground surface. Beneath the Upper Glacial Aquifer lies the Magothy aguifer which is comprised of finer sands, silt and small amounts of clay. The Upper Glacial Aquifer and the Magothy are in direct hydraulic connection. Clay lenses acting as aquitards are often found in the upper layers of the

Direction Distance Elevation

ation Site Database(s) EPA ID Number

299 MAIN STREET (Continued)

S106780937

EDR ID Number

Magothy. The water table at the site is 48-60 feet below ground

surface, and the groundwater flow direction is south-southwest."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is

complete. Prior to remediation, the primary contaminants of concern in soils and groundwater were Trimethylbenzene and Trichloroethene,

groundwater cleanup objectives for commercial use."

Health Problem: "The site may have contributed contamination to groundwater used for

public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and pavement. Soil vapor

respectively. Remedial actions have successfully achieved soil and

intrusion into on- and off-site buildings is possible. "

Site Description: "Location: The 118-130 Swalm Street site is located in the New Cassel

Industrial Area, an urban portion of Nassau County, NY. The site lies directly to the south of the Long Island Rail Road tracks. Site Features: The property is mostly covered by a one-story industrial building with the remainder of the site paved with the exception of a small grass area on the north end of the site. An abandoned trench once went through the building and connected to leach pools at the north side of the building. Current Zoning and Land Use: The site is zoned Industrial. The site is not currently occupied. The surrounding parcels are currently used for a combination of commercial and light industrial. The parcel on the north side of the property is owned by the Long Island Rail Road and used as a track right-of-way. Past Use of the Site: The most recent tenant, Liqui-Mark, a producer of felt-tipped pens, used and stored large quantities of chemicals. However, these chemicals did not contain tetrachloroethene (PCE) or trichloroethene (TCE) related compounds. The file review indicates the property was developed in 1961 and was formerly occupied by a mechanical engraving company, a plastics extrusion company, a vitamin manufacturer, and an ink ribbon manufacturer. Based on these types of operations, it is likely that they used products containing PCE and TCE related compounds. The site was listed on the Registry in May 1997 on the basis of on-site soil and groundwater sampling conducted by the NYSDEC in 1995 and 1996. Geology and Hydrogeology: The site is underlain by the Upper Glacial Aquifer that consists of mixed sands. silts and clays. Groundwater at the site occurs about 65 feet below

ground surface, and flows southwest."

Env Problem: "Nature and Extent of Contamination: Remediation at this site is

Direction Distance Elevation

Site Database(s) EPA ID Number

118 - 130 SWALM STREET (Continued)

S106780936

EDR ID Number

complete. The primary contaminants of concern at the site prior to listing included volatile organic compounds, primarily tetrachloroethene and trichloroethene. Monitoring carried out in 2009 thru 2011 indicates that levels of volatile organic compound contamination in groundwater have decreased, but still remain above standards, criteria and guidelines for tetrachloroethene. The remaining groundwater contamination is being managed under a Site Management Plan. On-site soil vapor intrusion sampling conducted in November 2008 indicates that soil vapor intrusion is a concern should the currently vacant building be re-occupied. This will be managed under the Site Management Plan. Soil vapor intrusion sampling conducted in off-site buildings during February 2017 indicate continued monitoring is necessary."

Health Problem: "Access to the site is unrestricted, however, contact with

contaminated soil or groundwater is unlikely unless they dig below the ground surface. People are not drinking contaminated groundwater because the public water supply that serves the area is treated to remove contaminants before the water is distributed to consumers. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for on-site impacts and off-site migration of site-related vapor contamination into indoor air. "

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "10/07/2020, 1640 hrs, ME t/c w/ Krissy [C2G]: C2G hired to removed

1,000 gallon, fiberglass fuel oil UST from PBS site. Michelle Biase from NCHD onsite to witness cleanup. No petroleum impacted

groundwater or soil was encountered during the tank removal, however there is contaminated soil underneath overfill line. No cleanup noted at time of call. No drain or waterbody impacts noted. 10/9/2020 0900 Hrs: RJP made call to Paul of C2G. 1000 gal fiberglass ball UST. UST was not leaking, but connection to fill line near top of tank was loose, causing release to soil. UST was removed, impacted soil confirmed to depth of tank bottom. Estimated release 10-20 gal. No

impacted soil was disposed, excavation was lined and backfilled. Contacting owner to arrange for cleanup. USGS DTW 51'. RJP. 10/23/2020 1245 Hrs: RJP made call to Paul for update. Have not yet

EDR ID Number

scheduled soil removal. Impacted soil observed along foundation wall to depth of estimated 8', estimated release at 10-20 gal from fill. Excavation was lined and backfilled due to structural concern, he will call to schedule further work. RJP. 11/13/21: Michele Biase of NCHD, no sampling occurred due to spill number being opened. RJP. 4/27/21: 1000 gal fiberglass fuel oil UST routine removal, NCHD on location. No holes observed, but observed impacted soil around fill line. C2G estimated release at 10-20 gal. Excavation was lined and backfilled, no soil excavated. USGS DTW 51'. RJP. 12/17/21: C2G performed removal of 1,000 gal fiberglass fuel oil UST, NCHD on location. Tank in good condition, no impacts beneath UST. Impacted soil observed along foundation wall to depth of estimated 8', estimated release at 10-20 gal from fill. Excavation was lined and backfilled due to structural concern. USGS DTW 51'. No impacted soil was excavated. No further cleanup documented. Impacted soil from estimated 10-20 gal release at fill line along foundation wall to depth of estimated 8' left in place. No further action. No documents. RJP."

Remarks: "Nassau Co Facility # 058789. Overfill spill of UST. Nassau Co Health

on scene all day with caller company. Cleanup is pending."

Classification: Significant threat to the public health or environment - action

required.

Region: 1.000 Acres: 130043B HW Code: Record Add: 11/18/1999 Record Upd: 01/07/2020 Updated By: **RKCORCOR**

"Location: This site is located at 567 Main Street in the western Site Description:

part of the New Cassel Industrial Area. Site Features: The site is about one acre, with one manufacturing building and a paved parking area covering most of the remaining area. Current Zoning and Land Use: The site is zoned Industrial. Past Use of the Site: The Atlas Graphics site was developed in 1950 and the site building was used as a warehouse for construction materials until 1977. In 1977, the

Direction Distance Elevation

tion Site Database(s) EPA ID Number

1000157194

EDR ID Number

property was purchased by Atlas Graphics Inc., which operated a photo-engraving manufacturing operation. This operation used about 300 gallons per year of trichloroethene (TCE). In 1977, there was a documented disposal of about 50 gallons of TCE to a cesspool located

on the southwest comer of the building. Site Geology and Hydrogeology: The site is underlain by the upper glacial aquifer which consists of mixed fine to coarse silty sands, with clay lenses and occasional gravel deposits. Groundwater is about 65 feet below

ground surface and groundwater flow is south-southwest."

Env Problem: "Nature and Extent of Contamination: Remediation at this site is

complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene; 1,1,1 Trichloroethane; and trichloroethene. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is

being managed under a Site Management Plan."

Health Problem: "The site may have contributed contamination to groundwater used for

public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and pavement. Soil vapor

intrusion into on- and off-site buildings is possible. '

DEC Memo: "08/27/11 09:27 NH left message for Karl Spinetta 516-414-2771

09/15/11 0905 Hrs (A): While speaking to DOT NAPOLI (MILRO

ASSOCIATES) she wanted to know whether an inspector had been assigned

to the case- informed her it was unassigned. 09/15/11 0905 Hrs (B): She said they had washed the floor yesterday, AND PERFORMED ONE

BORING THROUGH THE FLOOR. 09/15/11 0905 Hrs (C): They obtained a PID

measurement of 505ppm at 6ft below grade around a sewer trap. They believe there is an area of contaminated below the floor at least 3ft x 3ft in size, but they will perform additional borings TODAY.

09/15/11 0905 Hrs (D): DEC informed her the file would be updated and

given to a supervisor for review, and suggested she call back

tomorrow or next week to determine who had been assigned to the case. DR 9/16/11 FILE REASSIGNED 9/26/11 TJD Site inspection. Field report

& photos on E-DOCS. Backfill approved. Awaiting closure documentation. 3/25/12 TJD File review. All required closure documentation has been received. A total of 5 cu yds of petroleum contaminated soils were excavated and properly disposed of during the

remedial process. No further action is required.

DEC Memo: "11/4/21 1735 Hrs: RJP made call to Tony of Clean Globe, left

message. RJP. 11/5/21 0850 Hrs: RJP made call to Tony of Clean Globe, left message. USGS DTW 38'. RJP. 11/5/21 1025 Hrs: RJP took call from

Tony. Sunoco selling property, hired Clean Globe to do phase II assessment. Performed 5 GeoProbe borings, collected soil and groundwater samples. Analytical report indicated low levels of BTEX, would like DEC review. He is preparing reports, will follow up with

KS. RJP. 11/8/21 FILE REASSIGNED FROM KS TO JN 11/16/21 Report sent

Subsurface investigation included 5 borings with collection of soil and groundwater samples in Oct. 2021 for property transaction. All soil samples meet Part 375 Unrestricted SCOs. Total BTEX in water ranges from ND (SB-1 & SB-3) to SB-2= 15ug/l; SB-4= 786 ug/l; SB-5=

116 ug/l. Groundwater at 32 ft; flow West. No previous spills;

Reviewed Tank Excavation Assessment report provided by Impact Env. from Feb. 2018. Tanks removed and endpoints were clean. 1200 Tons removed at owner request (results were ND). Based on review of all files, concentrations of BTEX in groundwater are low and exceed at 3 locations; however, there is no source on site. Concentrations are low and expected to degrade absent the presence of contaminated soil. Nearest downgradient PSWs are ~0.75 mi west. Concentrations of VOCs

in groundwater are low; no further action. KS"

Remarks: "phase 2 results."

Classification: Significant threat to the public health or environment - action

required.

Region: Acres: 2.000 HW Code: 130043A Record Add: 11/18/1999 Record Upd: 01/07/2020 Updated By: RKCORCOR

"Site Location: This site is located at 570 Main St. in the western Site Description:

part of the New Cassel Industrial Area. Site Features: The site is about two acres, with one manufacturing building and a paved parking area covering most of the area. Current Zoning and Land Use: The site is zoned commercial/industrial. Currently, the building houses an autobody repair business and office space. Past Use of the Site: The site was occupied by IMC Magnetics Inc. from the early 1950s until 1992. Products made during that time included induction motors, fans and blowers, stepper motors and other rotating machines. Soils and

groundwater at the site are contaminated with chlorinated

hydrocarbons, petroleum hydrocarbons and metals. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat or release or exposure

NY VAPOR REOPENED

Direction Distance Elevation

Site Database(s) EPA ID Number

IMC MAGNETICS (Continued)

S106780926

EDR ID Number

pathway resulting from the site contamination. Operable Unit 1 is

on-site soils, and Operable Unit 2 is on-site and off-site

groundwater. Site Geology and Hydrogeology: The site is underlain by the upper glacial aquifer, consisting of mixed fine to coarse silty sands, with clay lenses and occasional gravel deposits. Groundwater is about 65 feet below ground surface and groundwater flows

south-southwest."

Env Problem: "Operable Unit 01: Nature and Extent of Contamination: Remediation at

the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and trichloroethene in soils and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Operable Unit 02: Nature and Extent of contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and trichloroethene in the off-site groundwater. Remedial actions have successfully achieved groundwater cleanup objectives for the site. Residual contamination is being

managed under a Site Management Plan."

Health Problem: "The site may have contributed contamination to groundwater used for

public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and pavement. Soil vapor

intrusion into on- and off-site buildings is possible. "

Contact Name: RICH LERNER

DEC Memo: "MECHANICS BAY AND STORM DRAIN 09/02/15 1115 Hrs (A): Called Lerner-

he said the THREE mechanics who work here have left the scene, and only the manager is present. 09/02/15 1115 Hrs (B): Apparently, the mechanics flushed some gasoline out of the building into the street, and it entered a storm drain. There is also an impacted drain INSIDE the building. There is a 30gal can in the building, but Lerner is NOT certain this was the source of the gasoline. 09/02/15 1115 Hrs (C): DEC informed Lerner that he could direct ANY responsible party to begin making appropriate cleanup arrangements (e.g. pads if there is just a sheen, hiring a contractor if necessary, etc). 09/02/15 1115 Hrs (D): DEC also informed Lerner that only VP was available at this time, and that he might have to respond to another emergency in Floral Park first, but that this office would have VP call him

directly to discuss the situation. DR 09/02/15 1340 Hrs: Valdi called the office. Harbors Cleaners has been retained by Safety Kleen to pump out the impacted dry well. WG Cleanup has been completed, no

further action required. (VP)"

Remarks: "A mechanic that has since left the scene dumped, or washed gasoline

out of a garage bay and into the street and a storm drain."

DEC Memo: "9/27/2016 10:00 Brian D. t/c to Lisa Usry, Home Owner - No answer

09/27/16 am: Checked the database but did not find any prior reports for this address. DR 09/27/16 1235 Hrs (A): Mrs Usry called- she said the boiler leaked on 8/13. Summit repaired the leak but did not provide an estimate of the amount of oil that leaked. They have now received a letter from their insurance denying coverage, and ONE reason was that the spill was not reported. DEC explained that

CERTAIN small basement spills are NOT REQUIRED to be reported TO THIS

AGENCY. 09/27/16 1235 Hrs (B): She said the oil impacted the boiler room and the separate tank room, and indicated the tank room has a

EDR ID Number

FINDS:

Registry ID: 110004438573

Click Here:

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking

environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

PARISH 11/04/93: Long Island Rail Road found oil on track right-of-way. Request meeting. 11/12/93: LIRR reported incident to DEC. 11/19/93 (A): DEC (Parish) met on site with LIRR. Fence between LIRR's property and AGIP's had been taken down. Appeared oil is dumped onto LIRR's property. Area approx 100ft long by unk width behind AGIP heavily stained. Has sketch and photos. 11/19/93 (B): Noted drum bungs in debris. Also noted a number of drums, and open

S102139211

trailers containing drums, on AGIP's property. 11/19/93 (C): LIRR had taken two soil samples. 11/19/93 (D): DEC took two soil samples. Pedneault to analyze. 12/03/93: Pedneault data- Found approx 94500ppb of Total Petroleum Hydrocarbons and trace of unidentifiable petroleum product . Did not find BTEX. 12/16/93 (A): LIRR FAXes their data- In sample Mile Post 22-1, found approx 9300ppb Acetone, approx 3000ppb Vinyl Acetate, approx 1800ppb Toluene, approx 1700ppb Xylenes, approx 7400ppb 2Ethylhexylphthalate, 1.2ppm Barium, and approx 71000ppb Total Petroleum Hydrocarbons. 12/16/93 (B): In sample Mile Post 22-2 , found approx 96000ppb Acetone and approx 130,000ppb Total Petroleum Hydrocarbons. 12/16/93 (C): NOTE- Some of the detection limits for other parameters were quite high. 12/17/93 (A): DEC (Parish & Acampora) met with LIRR and Ron Pappas (AGIP's Operations Manager) on site- He claimed they were burglarized approx 2 weeks prior. Said oil and antifreeze was stolen and spilled at the area in question. Said this was an ongoing problem since Ultralene owned the shop (PRIOR OCCUPANT?), 12/17/93 (B): Did not have any receipts for disposal of waste products. Drum residue taken from the drums prior to their removal. Found heavy contamination in area where they are cleaned. 12/17/93 (C): Drums supposedly taken by Goodman Brothers Steel Drum Co, 18 Division Place, Brooklyn NY. 12/17/93 (D): Requested cleanup of impacted areas. 12/20/93 (A): Savage Strauss Group (1 Harvard Way, Somerville NJ. 08876, 908-722-9000, consultant for AGIP)- AGIP contracted for development of a Spill Prevention Control and Countermeasure Plan. They have inspected site. Will be sending draft plan to AGIP shortly. 12/20/93 (B): Upon completion of SPCC Plan, will investigate area of possible spillage. Will determine whether petroleum hydrocarbons are present and their type. IF IT IS DETERMINED TO BE LIGHT HYDROCARBONS THAT ARE NOT COMPOUNDS FOUND IN MOTOR OIL, HYDRAULIC OIL, OR ANTIFREEZE, WE WILL THEN ADVISE YOUR OFFICE OF SUCH AND YOU CAN THEN APPROACH THE RAILROAD TO REMEDIATE THIS AREA OF CONTAMINATION. THIS WOULD BE EXPECTED TO BE DONE TO PREVENT IT FROM MIGRATING ONTO THE AMERICAN AGIP'S PROPERTY, IF IT HASN'T ALREADY . Their geologist has determined groundwater flow to be from LIRR property TOWARD theirs. 12/20/93 (C): If the hydrocarbons ARE typical of the above products, AGIP will implement a more detailed sampling plan to determine their extent. Would then develop remediation plan. 01/18/94: Letter to AGIP, cc LIRR and NCFM-Request copy of waste disposal receipts; determination of vertical and horizontal extent of contamination; removal of all contaminated soil; and disposal receipts for same. Gives scenario for failure to comply. 02/16/94: Strauss FAX- Due to bad weather, sampling is postponed until 18Feb. 08/31/94: Strauss called- Sampling for Total Petroleum Hydrocarbons showed count in 1000's of ppM. In addition, they confirm motor oil contamination. Are resampling today. DEC requested volatiles and semi-volatiles. 06/28/95: Yellowstone Environmental Services (131 Fulton Ave, Hempstead NY, 11550, 516-485-0000) letter- Have been contracted to perform surface and subsurface remediation. In process of acquiring necessary permits from LIRR. 08/22/95: Parish on site- Yellowstone cleaning up. Removed approx 40-50cy soil from along embankment. Four composite samples taken. Disposal receipts and lab data to be sent ASAP. Has sketch and photos. 09/11/95: Receive lab data- FIVE samples. Total Petroleum Hydrocarbons range from 186ppM to 6500ppM. 09/26/95: Letter to AGIP-Have reviewed soil data. Some contamination still present. Need additional excavation in area of samples 1 and 4. Resample after

excavation. 10/11/95: Parish on site- Yellowstone excavating areas in

Map ID MAP FINDINGS

S102139211

EDR ID Number

question. Removed approx 5cy soil. Took sample from each area. Plastic put over area and then filled with soil (will make it easier to excavate if more work needed). 10/18/95: Yellowstone letter-Enclose lab data. Sample 1A had 210ppM Total Petroleum Hydrocarbons, and sample 2 had 113ppM. 10/31/95: 95 Inc (68-H East Jefryn Blvd, Deer Park NY, 11729) Project Closure Report- Includes copies of various documents, such as soil disposal receipts and copies of the Aug and Oct lab data. 11/28/95: Spills memo to BECI- Enclose copy of disposal receipts. ALLIED ENVIRONMENTAL GROUP CLASSIFIED THE WASTE AS HEATING OIL. IT WAS REALLY LUBRICATING OIL. YOU MAY WISH TO CHECK THIS COMPANY'S CLASSIFICATION OF WASTES FOR DISPOSAL. THEY APPEAR TO BE A BROKER OF CONTAMINATED SOILS . 11/29/95: Letter to AGIP- Have reviewed the file and have received the disposal papers. No further requirements for this spill at this time. 05/12/97: DEC to review for closure (HAD BEEN KEPT OPEN DUE TO THE ONGOING NATURE OF THE PROBLEM HERE). ***OTHER SPILLS HERE- 8800743- DUMPING OF WASTE OIL INTO STORM DRAIN (NO PROOF AGIP WAS SPILLER) 8807176- DUMPING OF WASTE OIL INTO STORM DRAIN (NO PROOF AGIP WAS SPILLER) 8911394- 1K DIESEL TANK TEST FAILURE; TANK ALONE PASSED AFTER LINES WERE DISCONNECTED; TANK TO BE ABANDONED 9509570- DUMPING AT REAR OF PROPERTY ONTO LIRR PROPERTY? ***FOUND AT LEAST ONE OTHER SPILL BY AGIP- 9205015- UNSECURED CONTAINERS IN TRUCK FELL OVER AND LEAKED ONTO ROAD. "EAST SIDE OF HOUSE ***THIS INVOLVED THE ROUTINE REMOVAL OF A 550GAL DEC Memo:

> FUEL OIL TANK*** DR 12/23/16 approx 1245 Hrs (A): MIKE PALMISANO (NASSAU COUNTY HEALTH DEPARTMENT) had called- he said approximately

1/2cv of soil had been removed (from around the fill pipe?), and he wanted to know whether this had been reported. 12/23/16 approx 1245 Hrs (B): Informed him it had not been reported, and directed him to have the contractor report this to the Spill Hotline. DR 12/23/16

1310 Hrs: Checked Google Earth- this appears to be a COMMERCIAL site. DR 12/23/16 1310 Hrs: Left message for Palmisano- please confirm the NCHD was satisfied with the cleanup and forward a copy of his report to this office. DR 12/23/16 1315 Hrs: Palmisano faxed a copy of his report. DR 12/23/16 1315 Hrs: Palmisano called and confirmed he was

satisfied with the cleanup, DR"

DEC Memo: "04/01/11 between 1330 & 1430 Hrs (A): Lorraine (General Utilities

516-414-2714) called and spoke to KS- this was a line leak. 04/01/11 between 1330 & 1430 Hrs (B): They replaced the line and applied speedi dri, which they left for the owner to clean up. DR 04/04/11

1240 Hrs: BOB MADIERAZ (ENVIROSPECT 631-366-5294) left message. DR 04/04/11 1310 Hrs (A): Called Madieraz-THIS WAS A FINISHED BASEMENT

WITH ASBESTOS FLOOR TILES AND SOME IMPACTED SHEETROCK. 04/04/11 1310

Hrs (B): THEY WERE HIRED BY THE OWNER DIRECTLY TO CLEAN UP, which

will be done this week. 04/04/11 1310 Hrs (C): DEC informed him the spill was unassigned and directed him to call back after the cleanup with an update. DEC also informed him that if there was no impact to soil, floor drains, etc, the case would likely remain unassigned and that he should send his closure request summarizing what was performed for a cleanup to the Regional Spill Engineer. DR"

Remarks: "Leaked in basement onto concrete. Cleanup pending owners action

(Guellepse 516-333-8508)."

07/29/15 0900 Hrs: Left message for Barber. DR 07/29/15 0930 Hrs (A): Barber called- he confirmed that this aboveground tank leaked. The last delivery, which filled the tank, was on 7/10. General's records indicate the tank should have still been 7/8 full, but their mechanic found it to be only 3/4 full. 07/29/15 0930 Hrs (B): The mechanic put a magnapatch on the leak, and Johnson was advised to call her insurance to determine whether she has coverage for any cleanup. 07/29/15 0930 Hrs (C): DEC advised General to have Johnson call this office directly to discuss the cleanup process. DR Closure documents submitted. Cleanup completed by AB Oil. A total of 6 yards of contaminated soil generated and properly disposed of at AB Oil Service Ltd. No further action is required at this time. OK for

closure."

DEC Memo: "11/15/11 - HC on site. Met with Patricia Monti of Long Island

Compost. Tank is double walled steel with fiberglass coating. The manway gasket was suspected to be the cause of the test failure. F&N completed the repair on 11/14/11 and a re-test is scheduled for 11/16/11. 11/24/11 - T/C to F&N. As per Ferguson, originally thought manway gasket was the problem but it turned out the tank has a tilt to it and there is an air pocket that they cannot bleed. The tank passed an Estabrook EZ3 test and NCFM said they would accept that

test since their law changes beginning January 2012. Test is acceptable for NYS. No further action required."

EDR ID Number

PENSKE DISPUTED THIS ACCOUNT SO IANNARELLI CALLED LITTLE AGAIN. LITTLE SAID HE WAS STILL IN THE PROCESS OF HIRING PENSKE. 11/29/11 1230 Hrs (C): lannarelli requested a DEC response. DR informed him we only had one inspector in Nassau County at this time, and that we would call the inspector and have him call lannerelli directly. DR 11/29/11 1255 Hrs (A): Called lannarelli to update him and give him the Spill Number. 11/29/11 1255 Hrs (B): He said MILLER ENVIRONMENTAL GROUP had been hired, Hector Santos of MEG was on site, and the cleanup crew was enroute. 11/29/11 1255 Hrs (C): Iannarelli said the spillage was mostly in the right lane, a sand truck was on site, and the police might partially reopen the road. 11/29/11 1255 Hrs (D): He said the DRIVER WAS JOSE ALVARADO of New Brunswick NJ. 11/29/11 1255 Hrs (E): He said the INSURANCE WAS ZURICH AMERICAN INSURANCE (1400 American La, Shamburg IL, 60196, 702-279-8492, company insurance id #16535) and provided Shaw's policy number. DR 11/29/11 1300 Hrs (A): Called Iannarelli- GAVE HIM THE SECOND SPILL NUMBER. 11/29/11 1300 Hrs (B): He said VP had just called him. DR"

Remarks:

"A TRACTOR-TRAILER WAS MAKING A RIGHT TURN INTO THIS ADDRESS AND WAS STRUCK IN THE SADDLE TANK BY ANOTHER VEHICLE, RESULTING IN THE SPILL OF DIESEL FUEL ONTO THE ROADWAY. IT IS/WAS RAINING, SO AN UNKNOWN AMOUNT OF PRODUCT HAS ENTERED DRAINAGE. IN ADDITION, THE ROAD IS ENTIRELY CLOSED. IANNARELLI IS TRYING TO GET THE RESPONSIBLE PARTY TO HIRE A CONTRACTOR. (DR)"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Relative: SHWS:

Lower Name: FORMER TISHCON CORPORATION

Actual: Address: 68 KINKEL STREET

121 ft. City,State,Zip: WESTBURY, NY 11590

HW Program: Site Code: 58203 Classification: Ν Region: Acres: 0.250 HW Code: 130043F Record Add: 11/18/1999 Record Upd: 06/07/2013 Updated By: jgjones

Site Description: "Location: This site is located at 68 Kinkel Street in the central

part of the NCIA. Site Features: The one-quarter acre site is occupied by a single story, 2-bay garage. Current Zoning: The site is zoned Commercial/Industrial Past use of the Site: In 1982 and 1983, Tishcon encapsulated materials at this site, utilized 1,650 gallons of TCA as well as 8,000 gallons of methylene chloride and 3,000 gallons of shellac in its manufacturing process. This site was added to the Registry as a Class 2 site in 1995. A State Superfund investigation was completed in July 1996. In January 1997, a ROD requiring no action was issued for this site. The site was delisted from the Registry in December of 1997. Soil vapor sampling carried out March 2008 indicates elevated levels of VOC soil vapors on site. Site Geology and Hydrogeology: Site Geology and Hydrogeology: The site is underlain by the Upper Glacial Aquifer which consists of Upper Pleistocene deposits of poorly sorted sand and gravel to approximately 80 ft bgs. Beneath the UGA lies the Magothy aguifer which is comprised of finer sands, silt and small amounts of clay. The Upper Glacial aquifer and the Magothy are in direct hydraulic connection. Clay lenses acting as aquitards are ofter found in the upper layers of the Magothy. The water table at the site is 48-60 ft

bgs, and the groundwater flow direction is SSW."

Env Problem: "Nature and extent of Contamination: Soils: Up to 1,400 PPB of TCA

were found in soils below an abandoned cesspool on the North side of

the site. Groundwater: Past site operations have contaminated

groundwater beneath the site with TCA and 1,2 DCE. Cencentrations in groundwater as high as 33 and 99 ppb respectively. The contaminated groundwater is located within an EPA-designated sole-source aquifer. Soil Vapor: Soil vapor sampling carried out in March 2008 indicates

elevated levels of VOCs in soil vapor on site."

Region: Acres: 0.170 HW Code: 130043K 11/18/1999 Record Add: Record Upd: 01/10/2020 Updated By: **RKCORCOR**

"Location: This site is about 0.2 acres in size and located on the Site Description:

east side of Kinkel Street, south of Main Street in the New Cassel Industrial Area. Site Features: The site has a one story commercial building with the remainder of the property paved. Current Zoning and Land Use: The site is zoned Industrial. Past Use of the Site: The former occupants LAKA Tools and Stamping and LAKA Industries used

Direction Distance Elevation

tion Site Database(s) EPA ID Number

FORMER LAKA INDUSTRIES, INC. (Continued)

S106122240

EDR ID Number

trichloroethene as a degreaser. Site Geology and Hydrogeology: The site is underlain by the Upper Glacial Aquifer which consists of poorly sorted sand and gravel to approximately 80 feet bgs. Beneath the UGA lies the Magothy aquifer which is comprised of finer sands, silt and small amounts of clay. The Upper Glacial aquifer and the Magothy are in direct hydraulic connection. Clay lenses acting as aquitards are often found in the upper layers of the Magothy. The water table at the site is 48-60 feet below ground surface, and the

groundwater flow direction is south-southwest."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is

complete. Prior to remediation, the primary contaminant of concern in soil and groundwater was trichloroethene. Remedial actions have successfully achieved soil cleanup objectives for commercial use."

Health Problem: "The site may have contributed contamination to groundwater used for

public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and pavement. Soil vapor

intrusion into on- and off-site buildings is possible. "

231 **NEW CASSEL INDUSTRIAL AREA**

ESE BETWEEN OLD COUNTRY ROAD AND RAILROAD TRACKS 1/2-1

NEW CASSEL, NY 11590

0.555 mi. 2928 ft.

Relative: SHWS:

Higher Name: NEW CASSEL INDUSTRIAL AREA

BETWEEN OLD COUNTRY ROAD AND RAILROAD TRACKS Address: Actual:

122 ft. City,State,Zip: NEW CASSEL, NY 11590

HW Program: Site Code: 57676 Classification: Ρ Region: 1 Acres:

170.000 HW Code: 130043 Record Add: 11/18/1999 Record Upd: 03/10/2015 Updated By: **GTBOBERS**

Site Description: "The New Cassel Industrial Area (NCIA) is located in the Town of

North Hempstead, Nassau County. It encompasses approximately 170 acres of land. It is bounded by the Long Island Railroad to the north. Frost Street to the east. Old Country Road to the south, and Grand Boulevard to the southwest. The NCIA is a heavily developed industrial and commercial area. Development in this area dates back

to the 1950's and many of the properties have housed various

NY SHWS

EDR ID Number

businesses over the years. The topography is generally flat. A total of seventeen (17) sites within the NCIA were listed as Class 2 sites in the New York State Registry of Inactive Hazardous Waste Disposal Sites (the Registry). The listing of the 17 Class 2 sites, occurred between May 1995 and September 1999. Of the 17 Class 2 sites, three (3) were investigated and delisted from the Registry. Two sites were investigated, remediated and delisted from the Registry. Another site was investigated, remediated and reclassified as a Class 4 site. Operable Unit (OU) No. 3, consists of off-site groundwater primarily located to the south of the NCIA. The ROD specifying extensive groundwater remediation for OU3 was signed in 2003. A state-funded consultant conducted predesign sampling in 2008. The state-funded remedial design is underway."

Env Problem:

"Past site operations have contaminated the groundwater beneath the sites with chlorinated solvents well in excess of SCGs over large areas of the site. The groundwater standards are 5 parts-per-billion for most of the contaminants. Groundwater contamination plumes have migrated over 1,000 feet downgradient of the New Cassel Industrial Area with contaminant concentrations exceeding 1,000 part-per-billion of total VOCs. Groundwater is within an EPA-designated sole source aquifer. Contaminants have impacted the downgradient public water supply wells, which are more than 500 feet below ground surface."

Health Problem:

"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public

health exposure concerns."

S106905126

Updated By: GTBOBERS

Site Description:

Distance

Elevation

"The 36 Sylvester Street site is located in the NCIA, an urban area in Nassau County, NY. The site is mostly occupied by a warehouse, with the remainder of the site being paved. This site is located on the east side of Sylvester Street, running to the west side of New York Avenue, south of Main Street in the New Cassel Industrial Area. The site is currently operated by GEL-TEC (a division of Tishcon Corp.), and formerly by National Gear Products. The building covers most of the lot, with the exception of alleys on the north and south sides of the lot, a small parking area on the southeast side of the lot, and a loading area on the east side. A soil sample collected from a leaching pool on the southeast side of the property exhibited trace amounts of 1,1,1-trichloroethane. Groundwater samples collected from this same location exhibited high concentrations of 1,1,1-trichloroethane. Past site operations have contaminated groundwater beneath and downgradient of this site with high levels of 1,1,1-trichloroethane (162 ppb - 3,235 ppb). The contaminated groundwater is located within an EPA-designated sole-source aguifer. Two public water supply wells are located approximately 1,500 feet downgradient of the site. These wells are currently being impacted by VOCs from the New Cassel Industrial Area. The NYSDEC and Grand Machinery entered into a RI/FS Consent Order in March 2000. The investigation took place from June 2001 to August 2001, and the RI report was finalized in September 2002. An IRM removing contaminated sediments from a dry-well located on the SW corner of the property was carried out in May 2002. End point samples showed that the contamination was successfully removed. VOC contamination remaining in on-site groundwater was attributed to two upgradient sites. A Record of Decision was signed in March 2003 specifying that no further action need be taken at the site."

Env Problem:

"There are no environmental problems associated with the disposal of hazardous waste remaining at this site. VOC contamination remaining in on-site groundwater is attributed to two upgradient sites."

Health Problem:

"There are multiple groundwater contaminant plumes beneath the New Cassel Industrial Area. Activities within the site have contributed to the groundwater contamination. The Bowling Green Public Water Supply Wells are located 300 to 500 yards down-gradient of the industrial area and are contaminated with levels of volatile organic compounds (VOCs) that exceed New York State drinking water standards. Remediation of site-related source areas has reduced the level of VOCs in the raw water entering the Bowling Green wells. An air stripper was placed on the wells in 1995 to remove contaminants before water is distributed to customers. The remedy for the off-site groundwater contamination impacting the downgradient supply wells has yet to be implemented. Soil vapor investigations on and off-site are being implemented."

 RKCORCOR

Site Description: "Location: The Tishcon site is about 0.5 acres in size and is located

between Sylvester Street and New York Avenue midway between Old Country Road and Main Street in the New Cassel Industrial Area. Current Zoning and Land Use: The Site is zoned Industrial. Site Features: The site is largely occupied by a warehouse style building with the remainder of the property paved. Past Use of the Site: As part of their gelatin capsule manufacturing process, the Tishcon Corporation used 1,1,1 -trichloroethane (TCA) to remove mineral oil from the gelatin capsules. Approximately 4 drums of TCA were used per week. Site Geology and Hydrogeology: The site is underlain by the Upper Glacial Aquifer which consists of poorly sorted sand and gravel to approximately 80 feet below ground surface. Beneath the Upper Glacial Aquifer lies the Magothy aquifer which is comprised of finer sands, silt and small amounts of clay. The Upper Glacial Aquifer and the Magothy are in direct hydraulic connection. Clay lenses acting as aguitards are often found in the upper layers of the Magothy. The water table at the site is 48-60 feet below ground surface, and the

groundwater flow direction is south-southwest."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is

complete. Prior to remediation, the primary contaminant of concern in soils and groundwater was 1,1,1 TCA. Remedial actions have successfully achieved soil cleanup objectives for commercial use."

Health Problem: "The site may have contributed contamination to groundwater used for

public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and pavement. Soil vapor

intrusion into on- and off-site buildings is possible."

Site Description: "Location: The site is located at 125 State Street in the central

part of the New Cassel Industrial Area. Site Features: The site is about one acre and is occupied by a two-story building. The remainder of the site is paved. Current Zoning and Land Use: The site is zoned Commercial/Industrial Past Use of the Site: Tishcon Corporation was a tenant in this location from 1984 to 1996. As part of their gelatin capsule manufacturing process, the Tishcon Corporation used 1,1,1

EDR ID Number

-trichloroethane (1,1,1 -TCA) to remove mineral oil from the gelatin capsules. Equipment used in the process was rinsed out in the driveway where the storm drains are located. Site Geology and Hydrogeology: The site is underlain by the upper glacial aquifer, consisting of mixed fine to coarse silty sands, with clay lenses and occasional gravel deposits. Grounwater is about 65 feet below ground

surface and groundwater flow is south-southwest. '

Env Problem: "Nature and Extent of Contamination: Remediation at the site is

complete. Prior to remediation, the primary contaminants of concern

in soils and groundwater were methylene chloride and

1,1,1-trichloroethane. Remedial Actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is being managed under a Site Management Plan."

Health Problem: "The site may have contributed contamination to groundwater used for

public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and pavement. Soil vapor

intrusion into on- and off-site buildings is possible. "

Site Description: "Location: This site is located at 95, 97 and 99 State Street just

below Summa Avenue in the central part of the NCIA. Site Features: The site topograpy is flat and contains one two-story building and two one-story buildings which are connected. Current Zoning and Land Use: The site is zoned commercial/industrial. Past Use of the Site: Metpar Steel manufactures steel and formica partitions and doors. Nassau County Department of Health (NCDOH) records indicate that Metpar used up to 2,000 gallons per year of 1,1,1-trichloroethane (TCA) as a machine lubricant/cleaner. NCDOH site inspection also revealed TCA waste in an on-site cesspool. Downgradient groundwater sampling done by NYSDEC in 1994 showed elevated levels of TCA. This site was listed on the Registry in 1995. A Focused Source Area Remedial Investigation Report was complete in July 1996. A ROD was issued January 3, 1997, indicating No Action was necessary at the

site because no sources of contamination were found at the site. The site was delisted from the Registry in December of 1997. Site Geology and Hydrogeology: Site Geology and Hydrogeology: The site is underlain by the Upper Glacial Aquifer which consists of Upper Pleistocene deposits of poorly sorted sand and gravel to approximately 80 ft bgs. Beneath the UGA lies the Magothy aquifer

which is comprised of finer sands, silt and small amounts of clay. The Upper Glacial aquifer and the Magothy are in direct hydraulic connection. Clay lenses acting as aguitards are ofter found in the upper layers of the Magothy. The water table at the site is 48-60 ft bgs, and the groundwater flow direction is SSW."

Env Problem: "Past site operations have contaminated the groundwater beneath the

site with TCA. The contaminated groundwater is located within an EPA-designated sole-source aquifer. A remedial investigation showed

Site Description: "Location: This site includes a number of individual lots located at

648, 656, 662 and 670 Main Street, and 66 Brooklyn Avenue, in the central part of the New Cassel Industrial Area. Site Features: The site is about 1.5 acres in size and contains five separate buildings. Current Zoning and Land Use: The site is zoned Commercial/Industrial and is used in the construction of metal components. Past Use of the Site: Arkwin began operations in the New Cassel Industrial Area in 1955. Arkwin receives metal stock which is then machined, fabricated, degreased, polished, painted and assembled into finished products. Arkwin used 1,1,1-trichloroethane, tetrachloroethene, and other solvents in their production process. Operable Units: The site is divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 is the on-site soils. Operable Unit 2 consists of the on-site groundwater. Site Geology and Hydrogeology: The site is underlain by the Upper Glacial Aguifer that consists of mixed sands, silts and clays.

Groundwater at the site occurs at about 65 feet below ground surface,

and flows southwest."

Env Problem: "Operable Unit 01: Nature and Extent of Contamination: Remediation at

the site is complete. Prior to remediation the primary contaminant of concern in soils and groundwater was 1,1,1 Trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Operable unit 02: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminant of concern in the off-site groundwater was 1,1,1 Trichloroethane. Remedial actions have successfully achieved off-site groundwater remedial objectives for

the site. Residual contamination in the off-site groundwater is being

managed under a Site Management Plan. "

Health Problem: "The site may have contributed contamination to groundwater used for

public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and payement. Soil vapor

intrusion into on- and off-site buildings is possible. "

Site Description: "The Huron Tools site is located in an urban portion of Nassau

County, NY. The site address is 75 State Street, Westbury. Main site features include a one-story building and a parking lot. The site is surrounded by many industrial properties and hazardous wastes sites and is located within the New Cassel Industrial area. The historic source of contamination was the discharge of contaminated waste water to the former dry well. A Phase II Site Assessment removed contaminated soil within the former dry well and sampled groundwater but this data does not rule out groundwater contamination. A State funded site characterization was conducted in 2006 and the data from this characterization has been evaluated. It has been determined that

the site does not qualify for listing on the registry."

Env Problem: "The primary contaminants of concern are Trichloroethene and is

breakdown product Dichloroethene. The characterization indicates there is groundwater contamination in the site area but that there is not a source or significant impact to the environment. Groundwater is

approximately 50 feet below grade and flows to the south."

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D00

Waste Description: IGNITABLE WASTE

Waste Code: D002

Waste Description: CORROSIVE WASTE

Waste Code: D003

Waste Description: REACTIVE WASTE

Waste Code: D007 Waste Description: CHROMIUM

Waste Code: D009
Waste Description: MERCURY

Waste Code: F001

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F00

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste Code: F005

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Region:

Acres: 0.850 HW Code: 130043H 11/18/1999 Record Add: Record Upd: 01/07/2020 Updated By: **RKCORCOR**

Site Description: "Location: This site is approximately 0.85 acres in size and located on the south side of Main Street in the New Cassel Industrial Area.

Site Features: The main site features include an active industrial building with paved parking north and south of the building. Several shipping containers are located south of the building. Current Zoning and Land Use: The site is currently used for blending and repackaging materials and is zoned for industrial use. The surrounding parcels are currently used for commercial, industrial and parking. Past Use of the Site: Utility Manufacturing is an active facility that blends and repackages materials, including tetrachloroethylene (PCE). This company has operated since 1976 and processes several thousand pounds of PCE each year. In 1971, two 550-gallon above ground storage tanks were installed inside the building. Utility has stored PCE in these tanks since occupying the facility. In 1988, several dry wells and cesspools were sampled at the Utility site by Utility Manufacturing s consultant. Sampling results indicated that these drainage structures were contaminated with PCE and other VOCs. In 1989, Utility

Map ID Direction Distance Elevation MAP FINDINGS

Site EDR ID Number

Database(s) EPA ID Number

UTILITY MANUFACTURING/WONDER KING (Continued)

S106780932

Manufacturing pumped out and power washed the drainage structures. The remediation was overseen by the Nassau County Department of Health (NCDOH). Endpoint sampling results met soil cleanup objectives. In 1989, the facility was connected to the municipal sewer. In 1996, the NYSDEC s consultant issued a Preliminary Site Assessment (PSA) for several properties in the NCIA. Groundwater sampling results from the PSA showed PCE concentrations downgradient of the Utility site an order of magnitude greater than upgradient concentrations. The site was added to the Registry as a Class 2 in 1996. Operable Units: The site is divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is on-site contamination. OU2 consists of the off-site groundwater and soil vapor plumes. Site Geology and Hydrogeology: The geology at the site generally consists of sand and gravel. Clay lenses were also found in the subsurface, but no continuous clay layer exists in the vicinity the site. The water table fluctuates between 55-65 feet below ground surface and groundwater flows southwest toward the Bowling Green public supply wells.'

Env Problem:

"Remediation of the site is complete, except for natural attenuation of off-site contaminated groundwater. Prior to remediation, the contaminants of concern were tetrachloroethylene (PCE), trichloroethylene (TCE) and 1,2-dichloroethylene (DCE). Most recently, the highest levels of PCE, TCE and 1,2-DCE in the off-site groundwater were 12 parts-per-billion (ppb), 61 ppb, and 5 ppb, respectively. The New York State groundwater standard for each of these contaminants is 5 ppb."

Health Problem:

"Contaminated groundwater at the site is not used for drinking or other purposes and the site and surrounding area are served by a public water supply which is treated to remove contamination prior to distribution. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion concerns are limited to three off-site buildings. The potential for soil vapor intrusion is being addressed by a sub-slab depressurization system (a system that removes the air from beneath the building) which prevents vapors beneath the slab from entering the building and affecting indoor air quality in one off-site building. However, the two off-site buildings which were identified as having the potential for soil vapor intrusion declined to have either a sub-slab depressurization system installed or to participate in future soil vapor monitoring. "

Name: UTILITY MANUFACTURING/WONDER KING

Address: 700-712 MAIN STREET City,State,Zip: WESTBURY, NY 11590

Site Code: 55778 O&M Plan Control Name: HW Code: 130043H Control Code: 33 Control Type: **INST** Dt record added: 06/20/2007 03/29/2018 Dt rec updated: Updated By: **LSZINOMA** Site Code: 55778

Site Description: "Location: This site is approximately 0.85 acres in size and located

on the south side of Main Street in the New Cassel Industrial Area. Site Features: The main site features include an active industrial building with paved parking north and south of the building. Several shipping containers are located south of the building. Current Zoning and Land Use: The site is currently used for blending and repackaging materials and is zoned for industrial use. The surrounding parcels are currently used for commercial, industrial and parking. Past Use of the Site: Utility Manufacturing is an active facility that blends and repackages materials, including tetrachloroethylene (PCE). This company has operated since 1976 and processes several thousand pounds of PCE each year. In 1971, two 550-gallon above ground storage tanks were installed inside the building. Utility has stored PCE in these tanks since occupying the facility. In 1988, several dry wells and cesspools were sampled at the Utility site by Utility Manufacturing s

consultant. Sampling results indicated that these drainage structures were contaminated with PCE and other VOCs. In 1989, Utility Manufacturing pumped out and power washed the drainage structures. The remediation was overseen by the Nassau County Department of Health (NCDOH). Endpoint sampling results met soil cleanup objectives. In 1989, the facility was connected to the municipal sewer. In 1996, the NYSDEC s consultant issued a Preliminary Site Assessment (PSA) for several properties in the NCIA. Groundwater sampling results from the PSA showed PCE concentrations downgradient of the Utility site an order of magnitude greater than upgradient concentrations. The site was added to the Registry as a Class 2 in 1996. Operable Units: The site is divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is on-site contamination. OU2 consists of the off-site groundwater and soil vapor plumes. Site Geology and Hydrogeology: The geology at the site generally consists of sand and gravel. Clay lenses were also found in the subsurface, but no continuous clay layer exists in the vicinity the site. The water table fluctuates between 55-65 feet below ground surface and groundwater flows southwest toward the Bowling Green public supply wells."

Env Problem:

"Remediation of the site is complete, except for natural attenuation of off-site contaminated groundwater. Prior to remediation, the contaminants of concern were tetrachloroethylene (PCE), trichloroethylene (TCE) and 1,2-dichloroethylene (DCE). Most recently, the highest levels of PCE, TCE and 1,2-DCE in the off-site groundwater were 12 parts-per-billion (ppb), 61 ppb, and 5 ppb, respectively. The New York State groundwater standard for each of these contaminants is 5 ppb."

Health Problem:

"Contaminated groundwater at the site is not used for drinking or other purposes and the site and surrounding area are served by a public water supply which is treated to remove contamination prior to distribution. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion concerns are limited to three off-site buildings. The potential for soil vapor intrusion is being addressed by a sub-slab depressurization system (a system that removes the air from beneath the building) which prevents vapors beneath the slab from entering the building and affecting indoor air quality in one off-site building. However, the two off-site buildings which were identified as having the potential for soil vapor intrusion declined to have either a sub-slab depressurization system installed or to participate in future soil vapor monitoring. '

Site Code: 55778

Site Description: "Location: This site is approximately 0.85 acres in size and located

on the south side of Main Street in the New Cassel Industrial Area. Site Features: The main site features include an active industrial building with paved parking north and south of the building. Several shipping containers are located south of the building. Current Zoning and Land Use: The site is currently used for blending and repackaging materials and is zoned for industrial use. The surrounding parcels are currently used for commercial, industrial and parking. Past Use of the Site: Utility Manufacturing is an active facility that blends and repackages materials, including tetrachloroethylene (PCE). This company has operated since 1976 and processes several thousand pounds of PCE each year. In 1971, two 550-gallon above ground storage tanks were installed inside the building. Utility has stored PCE in these tanks since occupying the facility. In 1988, several dry wells and cesspools were sampled at the Utility site by Utility Manufacturing s consultant. Sampling results indicated that these drainage structures were contaminated with PCE and other VOCs. In 1989, Utility Manufacturing pumped out and power washed the drainage structures. The remediation was overseen by the Nassau County Department of Health (NCDOH). Endpoint sampling results met soil cleanup objectives. In 1989, the facility was connected to the municipal sewer. In 1996, the NYSDEC s consultant issued a Preliminary Site Assessment (PSA) for several properties in the NCIA. Groundwater sampling results from the PSA showed PCE concentrations downgradient of the Utility site an order of magnitude greater than upgradient concentrations. The site was added to the Registry as a Class 2 in 1996. Operable Units: The site is divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is on-site contamination. OU2 consists of the off-site groundwater and soil vapor plumes. Site Geology and Hydrogeology: The geology at the site generally consists of sand and gravel. Clay lenses were also found in the subsurface, but no continuous clay layer exists in the vicinity the site. The water table fluctuates between 55-65 feet below ground surface and groundwater flows southwest toward the Bowling Green public supply wells."

EDR ID Number

Env Problem: "Remediation of the site is complete, except for natural attenuation

of off-site contaminated groundwater. Prior to remediation, the contaminants of concern were tetrachloroethylene (PCE), trichloroethylene (TCE) and 1,2-dichloroethylene (DCE). Most recently, the highest levels of PCE, TCE and 1,2-DCE in the off-site groundwater were 12 parts-per-billion (ppb), 61 ppb, and 5 ppb, respectively. The New York State groundwater standard for each of

these contaminants is 5 ppb."

Health Problem: "Contaminated groundwater at the site is not used for drinking or

other purposes and the site and surrounding area are served by a public water supply which is treated to remove contamination prior to distribution. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion concerns are limited to three off-site buildings. The potential for soil vapor intrusion is being addressed by a sub-slab depressurization system (a system that removes the air from beneath the building) which prevents vapors beneath the slab from entering the building and affecting indoor air quality in one off-site building. However, the two off-site buildings which were identified as having the potential for soil vapor intrusion declined to have either a sub-slab depressurization system

installed or to participate in future soil vapor monitoring. '

Site Description: "Location: The EZ-EM site is about 2.3 acres in size and located in

> the New Cassel Industrial Area, an urban site in Nassau County, NY. Site Features: This site consists of a two story office/warehouse

Direction Distance Elevation

Site **EPA ID Number** Database(s)

EZ-EM, INC. (Continued)

S106780935

EDR ID Number

with a 70,000 square foot footprint, some roadways and parking lots. Current Zoning and Land Use: The Site is zoned Commercial/Industrial. Past Use of the Site: Advance Food Service Equipment Manufacturing, a stainless steel kitchen equipment supplier, occupied the site between 1968 and 1971. Micro Industries, a machine shop, occupied the site between 1971 and 1982. Since that time, EZ-EM has been at the site. Records indicate that Advance Food Service stored or used 1.1.1-trichloroethane and other solvents while at the site. A vat used for degreasing operations was located in the southwest corner of the building. Site Geology and Hydrogeology: The site is underlain by the Upper Glacial Aquifer which consists of poorly sorted sand and gravel to about 80 ft bgs. Beneath the Upper Glacial Aguifer lies the Magothy aquifer which is comprised of finer sands, silt and small amounts of clay. The Upper Glacial aquifer and the Magothy are in direct hydraulic connection. Clay lenses acting as aquitards are often found in the upper layers of the Magothy. The water table at the site is 48-60 feet below ground surface, and the groundwater flow direction is south-southwest."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation the primary contaminants of concern in

soils and groundwater were tetrachloroethene and 1,1,1

trichloroethane. Remedial actions have successfully achieved soil

cleanup objectives for commercial use."

Health Problem: "The site may have contributed contamination to groundwater used for

> public water supplies. Water from these wells is treated to remove contamination and minimize exposures to contaminants in drinking water. Direct contact with contaminated soil is unlikely because the site is primarily covered with building and pavement. Soil vapor

intrusion into on- and off-site buildings is possible. "

Classification: Site is properly closed - requires continued management.

Region:

Acres: 0.414 HW Code: 130074 Record Add: 11/18/1999 Record Upd: 07/16/2019 Updated By: **WJPARISH**

Site Description: "Location: The Bartlett Tree Company site is located at 345 Union

> Avenue in the Village of Westbury, Town of North Hempstead. Site Features: The site is approximately 0.4 acres in size. A two story facility building is on the site. Current Zoning/Use: The site is

currently zoned for commercial use and is located in a

commercial/industrial setting. The Bartlett Tree Company provides horticultural services to the surrounding communities. Past Use of the Site: The Bartlett Tree Company has occupied the site since the mid-1950s. Pesticides are stored on-site for use in the horticultural services they provide. Site Geology/Hydrogeology: The water table is encountered approximately 29'-32' below ground surface, depending on seasonal variation. The site specific groundwater flow direction is

south/southwest."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is

complete. Prior to remediation, the primary contaminants of concern were aldrin, alpha BHC, chlordane, DDD, DDE, DDT, dieldrin and lindane. Soil: Remediation Complete: Remediation in the form of source removal (soil excavation) has reduced contaminant levels in subsurface soil to levels meeting either the commercial use or protection of groundwater SCOs. Approximately 438 tons of

contaminated soil was excavated and disposed of off-site at permitted disposal facilities. Groundwater: Remediation Complete: While pesticides in groundwater were found to exceed SCGs, detections were extremely low (parts per trillion) and are expected to diminish to levels meeting SCGs as a result of source removal. Groundwater samples collected in September 2016 revealed chlordane, dieldrin. 4,4'-DDD, 4,4'-DDE & 4,4'-DDT at concentrations ranging from 24 ppt to 810 ppt. Groundwater is being monitored under an approved site management plan to evaluate the effectiveness of the source

TC6848502.2s Page 601

Direction Distance Elevation

evation Site Database(s) EPA ID Number

BARTLETT TREE COMPANY (Continued)

S106780906

EDR ID Number

remediation to ensure the continued reduction of contaminant levels

in groundwater."

Health Problem: "Since the site is fenced and covered by buildings, asphalt, or

concrete, people will not come into contact with residual

site-related soil and groundwater contamination unless they dig below the surface. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although sampling has indicated that impacts to indoor air are not a current concern, the potential exists to inhale contaminants in indoor air due to soil vapor intrusion in on-site building development and occupancy. Insufficient environmental information exists to evaluate the potential for soil vapor intrusion

to occur in off-site areas."

"Location: The site is located in a suburban area. Site Features: The Site Description:

main site features include one commercial building and paved parking. Current Zoning and Land Use: The site is currently used as a retail department store and is zoned for industrial use. The surrounding parcels have commercial and industrial uses. The nearest residential area is 1,000 feet north of the site. Past Use of the Site: Applied Fluidics, a division of Allard Instruments, occupied this site from 1974 to 1982. Applied Fluidics was a defense contractor that manufactured research instruments and leak detectors. As reported in the Nassau County Department of Health (NCDH) industrial chemical survey, the company used trichloroethylene (TCE), paint thinners and petroleum distillates. Since the building was not connected to the municipal sewers until 1983, subsurface disposal was the common means of waste disposal. The building was demolished in early 1998 and the site was excavated to a depth of approximately 20 feet below ground surface as part of the redevelopment of the area. Department personnel sampled the excavated soil. The sampling results revealed that the samples contained tetrachloroethlylene (PCE). Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 is the soil contamination. Operable Unit 2 is the combined groundwater contamination at this site, the 89 Frost Street Site and the Former Autoline Automotive Site - the three sites are collectively known as the Frost Street Sites. Operable Unit 3 is the combined groundwater contamination downgradient of the New Cassel Industrial Area sites. Operable Unit 3 has been included as part of the New Cassel/Hicksville Ground Water Contamination National Priorities List Site, which has been listed on the Registry as Site Number 130215. Site Geology and Hydrogeology: The geology at the site generally consists of sand and gravel. Clay lenses were also found in the subsurface, but no continuous clay layer exists in the vicinity the site. The water table fluctuates between 55-65 feet below ground

Direction Distance Elevation

S106780934

EDR ID Number

surface and groundwater flows southwest toward the Bowling Green

public supply wells."

Env Problem: "Nature and Extent of Contamination: For Operable Unit 1: Soil

Contamination The original building was demolished by the property owner in early 1998 and most of the site, including all drainage structures, was excavated to a depth of approximately 20 feet below ground surface (bgs) as part of the redevelopment of the area. The excavated soils, demolition debris and drainage structures were disposed off-site. This work was conducted by the property owner without any oversight by the Department. During the Remedial Investigation in 1998, ten soil samples were collected and analyzed for Volatile Organic Compounds (VOC). Of the VOCs of concern within the New Cassel Industrial Area, only two were found in the on-site soils above the limits of detection. Trichloroethene (TCE) was found

in soil samples collected at 50-54 feet bgs at 0.0045

parts-per-million (ppm) and tetrachloroethene (PCE) was found at 0.0686 ppm, which both are below soil cleanup objectives. While these levels of soil contamination do not warrant remediation, they are an indication of past contamination. For Operable Unit 2: Combined Groundwater Contamination for the Frost Street Sites The Department conducted a combined groundwater investigation for the three Frost

Street Sites. The contaminants of concern are PCE, TCE,

1,2-dichloroethylene (1,2-DCE) and 1,1,1-trichloroethane (1,1,1-TCA). VOC contamination was found from the water table surface to the maximum sampling depth, 145 feet bgs. Maximum PCE, TCE, 1,2-DCE and

1,1,1-TCA concentrations were 120,000 parts-per-billion (ppb), 3,600 ppb, 660 ppb and 359 ppb, respectively. The New York State groundwater standard for each of these compounds is 5 ppb."

"Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that

obtains water from a different source not affected by this

contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to control the potential inhalation of site contamination due to soil vapor intrusion for any future on-site redevelopment and/or occupancy."

Site Description: "Location: The site is located in a suburban area. Site Features: The

main site features include one industrial building and paved parking.

Current Zoning and Land Use: The site is currently used to

manufacture stone countertops and is zoned for industrial use. The surrounding parcels have commercial and industrial uses. The nearest

residential area is 1,000 feet north of the site. Past Use of the Site: Former tenants, Autoline Automotive Corporation and National Bassen Textiles, had documented use of degreasers and unknown chemicals, respectively. Two dry wells/cesspools are believed to have

existed in the western portion of the site. Downgradient

concentrations of tetrachloroethylene (PCE) and 1,1,1-trichloroethane (TCA) were higher than upgradient concentrations of these chemicals. Map ID Direction Distance Elevation

EDR ID Number

EPA ID Number

Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 is the soil contamination. Operable Unit 2 is the combined groundwater contamination at this site, the 89 Frost Street Site and the Former Applied Fluidics Site - the three sites are collectively known as the Frost Street Sites. Operable Unit 3 is the combined groundwater contamination downgradient of the New Cassel Industrial Area sites. Operable Unit 3 has been included as part of the New Cassel/Hicksville Ground Water Contamination National Priorities List Site, which has been listed on the Registry as Site Number 130215. Site Geology and Hydrogeology: The geology at the site generally consists of sand and gravel. Clay lenses were also found in the subsurface, but no continuous clay layer exists in the vicinity the site. The water table fluctuates between 55-65 feet below ground surface (bgs) and groundwater flows southwest toward the Bowling Green public supply wells.'

Env Problem:

"Nature and Extent of Contamination: For OU1: Soil Contamination Based on investigations conducted to date, the primary contaminants of concern for OU1 are volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs) and metals. The VOCs of concern are tetrachloroethylene (PCE), trichloroethylene (TCE), and xylenes. The SVOCs of concern include benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene and dibenzo(a,h)anthracene. The metals of concern are chromium, copper, nickel, lead, mercury and zinc. Of the VOCs of concern, xylenes were found at the bottom of on-site drywells while PCE and TCE were detected in the deeper soil. Ortho-xylene and meta¶-xylene were detected at 5.2 parts-per-million (ppm) and 6.6 ppm, respectively, exceeding the SCG of 0.26 ppm for both isomers. TCE was detected at levels up to 3.8 ppm, with two samples above the unrestricted use soil cleanup objective (USCO) of 0.47 ppm. PCE was detected at levels up to 24.2 ppm, with three samples above the USCO of 1.3 ppm. SVOCs were detected in surface soil samples and stormwater drywells. Benzo(a)anthracene was detected at levels up to 5 ppm, exceeding the USCO of 1 ppm. Chrysene was detected at levels up to 6.3 ppm, exceeding the USCO of 1 ppm. Benzo(b)f1uoranthene was detected at levels up to 9.4 ppm, exceeding the USCO of 1 ppm. Benzo(a)pyrene was detected at levels up to 4.8 ppm, exceeding the USCO of 1 ppm. Dibenzo(a,h)anthracene was detected at levels up to 0.44 ppm, exceeding the USCO of 0.33 ppm. Several metals exceeded their USCOs in the surface and subsurface soils. Chromium, copper, nickel, lead, zinc, and mercury were detected at 254 ppm, 1,200 ppm, 125 ppm, 5,410 ppm, 804 ppm, and 0.36 ppm, respectively. The USCOs for chromium, copper, nickel, lead, zinc, and mercury are 30 ppm, 50 ppm, 30 ppm, 63 ppm, 109 ppm, and 0.18 ppm, respectively. For OU2: Combined Groundwater Contamination for the Frost Street Sites The Department conducted a combined groundwater investigation for the three Frost Street Sites. The contaminants of concern are PCE, TCE, 1,2-dichloroethylene (1,2-DCE) and 1,1,1-trichloroethane (1,1,1-TCA). VOC contamination was found from the water table surface to the maximum sampling depth, 145 feet bgs. Maximum PCE, TCE, 1,2-DCE and 1,1,1-TCA concentrations were 120,000 parts-per-billion (ppb), 3,600 ppb. 660 ppb and 359 ppb, respectively. The New York State groundwater standard for each of these compounds is 5 ppb.

EDR ID Number

Significant Threat: The site presents a significant threat to human health and an environmental threat associated with the site's contravention of groundwater standards in a sole source aquifer."

"Direct contact with contempated soil is unlikely because the site."

Health Problem: "Direct contact with contaminated soil is unlikely because the site

is primarily covered with building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination."

Site Description:

"Location: The site is located in a suburban area. Site Features: The main site features include paved parking. Current Zoning and Land Use: The site is currently used as parking for the neighboring department store and is zoned for industrial use. The surrounding parcels have commercial and industrial uses. The nearest residential area is 1,000 feet north of the site. Past Use of the Site: Adchem Corporation, a double coated adhesive tape manufacturer, occupied the site from 1971 to 1973. Unicord, a manufacturer of music amplifiers, occupied the site from 1980 to 1987. Marvex Corporation, a processing and finishing company, occupied the site sometime during the life of the structure, although the exact time period is unknown. The last known occupant of the building was Korg Electronics from 1988 to 1994. Although there is no documentation that these occupants used volatile organic compound (VOC) related chemicals at this facility, at least one, Adchem, does have a history of VOC usage at other facilities in the New Cassel Industrial Area. Two dry wells/cesspools were documented to have existed in the western portion of this site and one in the eastern portion. Downgradient groundwater concentrations of tetrachloroethylene, 1,1,1-trichloroethane and related compounds were higher than upgradient concentrations of these chemicals. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 is the soil contamination. Operable Unit 2 is the combined groundwater contamination at this site, the Former Autoline Automotive Site and the Former Applied Fluidics Site - the three sites are collectively known as the Frost Street Sites. Operable Unit 3 is the combined groundwater contamination downgradient of the New Cassel Industrial Area sites. Operable Unit 3 has been included as part of the New Cassel/Hicksville Ground Water Contamination National Priorities List Site, which has been listed on the Registry as Site Number 130215. Site Geology and Hydrogeology: The geology at the site generally consists of sand and gravel. Clay lenses were also found in the subsurface, but no continuous clay layer exists in the vicinity the site. The water table fluctuates between 55-65 feet below ground surface (bgs) and groundwater flows southwest toward the Bowling Green public supply wells." "Nature and Extent of Contamination: For OU1: Soil Contamination Based on investigations conducted to date, the primary contaminatns of concern for OU1 are volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs) and metals. The VOCs of concern are tetrachloroethylene (PCE) and trichloroethylene (TCE). The SVOCs of concern include phenol, benzo(a)anthracene, chrysene, and benzo(b)fluoranthene. The metals of concern are cadmium, chromium, mercury and zinc. The VOCs of concern were detected in the soils deeper than 25 feet below ground surface (bgs). TCE and PCE were detected at maximum concentrations of 1.6 parts-per-million (ppm) and 47 ppm, respectively. The unrestricted use soil cleanup objectives (USCOs) for TCE and PCE are 0.47 ppm and 1.3 ppm, respectively. Sampling data for SVOCs and metals were available for shallow soils. Deeper soils were not tested for SVOCs or metals, as these compounds were not found in the groundwater. Of the SVOCS, phenol was detected at levels up to 1.0 ppm, exceeding the USCO of

0.33 ppm. Benzo(a)anthracene was detected at levels up to 1.1 ppm, exceeding the USCO of 1 ppm. Chrysene was detected at levels up to

89 FROST STREET SITE (Continued)

Health Problem:

S106780933

EDR ID Number

1.2 ppm, exceeding the USCO of 1 ppm. Benzo(b)f1uoranthene was detected at levels up to 1.9 ppm, exceeding the USCO of 1 ppm. Several metals exceeded their USCOs in the shallow soils. Cadmium, chromium, copper, mercury and zinc were detected at 3.4 ppm, 33.3 ppm, 141 ppm, 0.43 ppm, and 509 ppm, respectively. The USCOs for cadmium, chromium, copper, mercury and zinc are 2.5 ppm, 30 ppm, 50 ppm, 0.18 ppm, and 109 ppm, respectively. For OU2: Combined Groundwater Contamination for the Frost Street Sites The Department conducted a combined groundwater investigation for the three Frost Street Sites. The contaminants of concern are PCE, TCE, 1,2-dichloroethylene (1,2-DCE) and 1,1,1-trichloroethane (1,1,1-TCA). VOC contamination was found from the water table surface to the

maximum sampling depth, 145 feet bgs. Maximum PCE, TCE, 1,2-DCE and 1,1,1-TCA concentrations were 120,000 parts-per-billion (ppb), 3,600 ppb, 660 ppb and 359 ppb, respectively. The New York State

ppb, 660 ppb and 359 ppb, respectively. The New York State groundwater standard for each of these compounds is 5 ppb."
"Direct contact with contaminated soil is unlikely because the site

is primarily covered with building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to control the potential inhalation of site contamination due to soil vapor intrusion for any future

on-site redevelopment and/or occupancy."

Significant threat to the public health or environment - action Classification:

required.

Region:

Acres: 0.200 HW Code: 130088 Record Add: 11/18/1999 Record Upd: 01/10/2020 Updated By: **RKCORCOR**

Site Description: "Location: The 123 Post Avenue site is located in the Village of

> Westbury, Nassau County. Site Features: The site consists of a 50' by 189' lot, approximately 0.2 acres in area, and is occupied by a one-story building. The remainder of the site is paved. An elevated LIRR line is adjacent to the southern border of the site. The surrounding areas are used for commercial and residential purposes. Current Zoning and Land Use: The site is currently zoned for commercial use and an active dry cleaner operates on site. Past Use of the Site: Dry Cleaning has been conducted at the site since the 1950s. The site was placed on the NYS Registry of Inactive Hazardous Waste Disposal Sites in December of 1998 after the Nassau County Department of Health performed a facility inspection in July 1995. Operable Units: An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The site is currently being managed as two operable units, one for on-site (OU-1) and one for the off-site groundwater (OU-2). Site Geology and Hydrogeology: The depth to water

is approximately 35 feet and flows to the south-south west. The soils at the site consist of sands and clays to a depth of several hundred

feet before bedrock is encountered."

Env Problem: "Nature and Extent of Contamination: OU 1: On-Site Areas Based on the

investigations conducted to date the primary contaminant of concern

is tetrachloroethene (PCE) and its breakdown products-

trichloroethene (TCE) and dichloroethene (DCE). PCE was detected in the on-site soils at a concentration of up to 190 parts per million (PPM). The unrestricted soil cleanup objective for PCE is 13 ppm. PCE was detected in the on-site groundwater at 14 parts per billion

(PPB). The NYS ambient water quality standard for PCE is 5 ppb. Soil Vapor and Indoor Air - tetrachloroethene (PCE) was detected in soil vapor at elevated concentrations and was also detected in the on-site building indoor air. OU 2: Off-Site Groundwater Based on the investigations conducted to date the primary contaminant of concern is PCE and its breakdown products- TCE and DCE. These contaminants were initially detected downgradient of the site at concentrations up to 5,000 ppb. A pilot study was conducted between October 2011 and March 2013 where at various locations, a chemical oxidant was

injected into the plume to assess its destructive affect on the contamination. The injections reduced PCE concentrations from 5,000 ppb to less than 800 micrograms per liter in the study area. PCE continues to exceed the groundwater standard of 5 ppb beneath the site and for at approximately 2,800 feet downgradient of the site.

From December 2017 - January 2018 additional groundwater samples were collected from the newly installed groundwater monitoring wells located between Old Country Road and Miller Avenue, southwest of the 123 Post Ave site. PCE ranged from non-detect to 1,280 ppb with the

highest detection at the intersection of Corporate Drive and

Direction Distance

Elevation Site Database(s) EPA ID Number

123 POST AVENUE (Continued)

S106780907

EDR ID Number

Merchants Concourse at a depth of about 290 feet below ground surface. A feasibility study is being conducted to develop remedial

alternatives to address this contamination."

Health Problem: "Soil vapor from the site caused indoor air contamination at several

neighboring homes and businesses. The soil vapor extraction system operating at the site has effectively reduced concentrations of

tetrachloroethene in these buildings. NYSDOH and NYSDEC will evaluate

the need to conduct additional investigations to determine the potential for soil vapor intrusion into structures near the off-site

groundwater plume. Direct exposures to the contaminated groundwater are not expected, because the site and surrounding area are served by a public water supply. There are three active public water supply wells nearby. Two are treated to remove volatile organic compound contamination (not from this site), and the third does not require

treatment to comply with standards."

SHWS:

SULZER METCO, INC. Name: Address: 1101 PROSPECT AVENUE WESTBURY, NY 11590 City, State, Zip:

Program: HW Site Code: 379777 Classification: Ν Region: Acres: 7.500 HW Code: 130178 Record Add: 04/13/2007 Record Upd: 03/02/2018 Updated By: **GTBOBERS**

Site Description: "Location: The Sulzer Metco site is located in a suburban area. The

> site lies just east of the Wantagh Parkway. Site Features: The main site feature is a large building which is surrounded by parking and roadways on three sides. Industrial processing equipment and material storage occupy the north side. Current Zoning/Use: The site is currently active and is zoned industrial. The Board of Cooperative Education Services (BOCES) Career and Technical Education Center lies directly to the north of the site. Other surrounding parcels are generally industrial or commercial use. The nearest residential property is approximately 450 feet west of the site. Historical Use: Historically, site operations involved the manufacture of metallic and ceramic powders for use in the thermal spray coating industry, as well as manufacture of thermal spray guns and parts. Site operations have also included wedging (compression and stretching of wire that has been filled with metal powder), blending of metallic or ceramic powder with a lacquer and glue. During the course of operations, Sulzer Metco, Inc. has used industrial solvents as degreasers in its processes. Based on the review of Nassau County Department of Health (NCDOH) and State Pollution Discharge Elimination (SPDES) files, it appears that the primary solvents were PCE, TCE, 1,1-DCA, and TCA. Solvents were used on site between 1955 and 1978. It appears that spent solvents were disposed into floor drains to on-site subsurface discharge points. UIC work was conducted during the 1990s with NCDH oversight. Site Geology and Hydrogeology: Groundwater is located 56 ft below grade and flows in a south southwest direction. The area soils consist mainly of sands with varying layers that consisting of silt, sands and gravel. Entered into the BCP program under site code

C130178."

Env Problem: "Nature and Extent of Contamination: Based on the Site

Characterization Investigation the primary reported contaminants are

PCE, TCE, Manganese mercury, arsenic, nickel, and zinc. Soil-Mercury, Arsenic, Nickel and Zinc were reported in on-site soils. Mercury at 0.48 mg/kg (Part375 unrestricted 0.18 ppm), Arsenic at 20 mg/kg (Part375 unrestricted 13ppm), Nickel at 87 mg/kg (Part375 unrestricted 30ppm) and Zinc at 130 mg/kg (Part375 unrestricted 109ppm). Groundwater-PCE, TCE, Manganese, Iron and sodium were detected in groundwater above drinking water standards. The Maximum reported levels were: PCE 8.8 ug/l (off-site), TCE 40 ug/l(off-site), and Manganese 620 ug/, Iron 5,400 ug/l, and Sodium 140,000 ug/l on-site. There is an upgradient NC DPW salt storage facility. Soil Vapor and Indoor Air-PCE ranged from 14-1000 ug/m3 in on-site soil vapor. "

"Location: The 1101 Prospect Avenue site is located in a suburban area. The site lies just east of the Wantagh Parkway. Site Features: The main site feature is a large building which is surrounded by parking and roadways on three sides. Industrial processing equipment and material storage occupy the north side of the site. Current Zoning/Use: The site is currently active and is zoned industrial. The Board of Cooperative Education Services (BOCES) Career and Technical Education Center lies to the north and east of the site. Other surrounding parcels are generally industrial or commercial use. The nearest residential property is approximately 450 feet west of the site. Past Use of the Site: Historically, site operations involved the manufacture of metallic and ceramic powders for use in the thermal spray coating industry, as well as manufacture of thermal spray guns and parts. Site operations have also included wedging (compression and stretching of wire that has been filled with metal powder), and blending of metallic or ceramic powder with a lacquer and glue. During operations, Sulzer Metco, Inc., used industrial solvents as degreasers in its processes. Based on the review of Nassau County Department of Health (NCDH) and State Pollution Discharge Elimination (SPDES) files, it appears that the primary solvents were tetrachloroethene (PCE), trichloroethene (TCE),1.1 dichloroethane (1,1-DCA), and trichloroethane (TCA). Solvents were used on site between 1955 and 1978. It appears that spent solvents were disposed into floor drains to on-site subsurface discharge points. Underground Injection Control cleanup work was conducted during the 1990s with NCDH oversight. Site Geology and Hydrogeology: Groundwater is located 56 feet below grade and flows in a south-southwest direction. The area soils consist mainly of sands with varying layers consisting of silt, sands and gravel." "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), PFAS, metals, polychlorinated biphenyls (PCBs), pesticides and herbicides. Based on the results of the Site Characterization and Remedial Investigations conducted to date the primary contaminants of concern are tetrachloroethene (PCE) and its associated degradation products, trichloroethene (TCE) and cis-1,2 Dichloroethene (DCE). Total PFAS results ranged from 22.3ng/L to 2890ng/L, with PFOS ranging from 0.9ng/L to 1320ng/L and PFOA ranging from 1.9ng/L to 435ng/L. Soil: The site characterization reported on-site metals slightly above unrestricted soil cleanup objectives. Mercury, arsenic, nickel and zinc were reported in on-site soils; Mercury at 0.48 parts per million (ppm) (Part375 unrestricted 0.18 ppm), Arsenic at 20 ppm (Part375 unrestricted 13 ppm), Nickel at 87 ppm (Part375 unrestricted 30 ppm) and Zinc at 130 ppm (Part375 unrestricted 109 ppm), and benzo(a)pyrene up to 5.9 ppm (Part375 unrestricted 1.0 ppm). Groundwater: PCE, TCE, manganese, iron and sodium were detected in groundwater above drinking water standards. The maximum reported levels were: PCE 8.8 parts per billion (ppb), TCE 40 ppb, Manganese 620 ppb, Iron 5,400 ppb, and Sodium 140,000 ppb. There is an upgradient Nassau County Department of Public Works salt storage facility and other sites in this. Data does not indicate any off-site impacts in groundwater related to this site. Drinking water in this area is supplied by public water supply companies from wells that are monitored on a regular schedule to ensure the quality of the drinking water to consumers. Soil Vapor and Indoor Air: PCE

was detected in sub-slab soil vapor elevated concentrations from 14 to 1000 ug/m3 (micrograms per cubic meter) and PCE was also detected in sub-slab soil vapor at concentrations up to 3,920 ug/m3 and PCE was detected in indoor air up to 2.14 ug/m3. TCE, Data does not indicate any off-site impacts in soil vapor related to this site. "
"Direct contact with contaminants in the soil is unlikely because the

"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this

contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for on-site impacts and

off-site migration of site-related contaminants in indoor air."

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is

used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the

estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TSCA SUBMITTER

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/11/2021 Date Data Arrived at EDR: 11/12/2021 Date Made Active in Reports: 02/01/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date: 2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

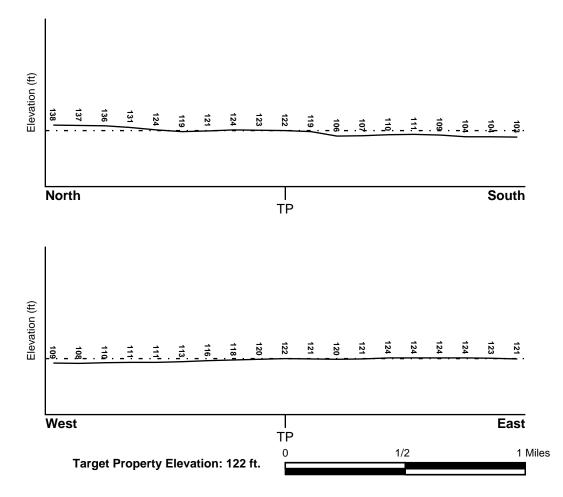

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HICKSVILLE YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

 GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
	Bou	ndary		Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam

loamy sand sandy loam fine sandy loam

Surficial Soil Types: silt loam

> loamy sand sandy loam fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock

very gravelly - loamy sand

stratified sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database

Source: Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon Source: Department of Health Telephone: 518-402-7556 Radon Test Results

Area Radon Information Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared

in 1975 by the United State Geological Survey
