

Foxglove Beardtongue ‘dark towers’ (*Penstemon digitalis*): This plant is not native to NY, but is naturalized, not-invasive and very beneficial to bees and hummingbirds. This cultivar has showy, light pink, tubular flowers that bloom early in the season. Their leaves and stems have hairs and are a medium green color. The tubular flowers attract long-tongued bees including honeybees and bumblebees, as well as mason bees and various other types. Butterflies, moths, and hummingbirds also drink its nectar. Blooms April through July.
