

Threadleaf coreopsis (*Coreopsis verticillata*): This plant has yellow, daisy-like flowers and typically grows in dense, bushy clumps. It provides nectar and pollen for butterflies and other pollinators and its seeds are eaten by songbirds. There are many cultivated varieties with slightly different characteristics (see photos below). Blooms June through September.

***Coreopsis verticillata* ‘zagreb’**

***Coreopsis verticillata* ‘moonbeam’**

Coreopsis verticillata 'full moon'
