

**Coastal plain Joe pye weed (*Eutrochium dubium* 'little joe')**: This plant is an herbaceous perennial with small disk flowers (rays absent) in clusters ranging in color from pale pink to dark purple. The 'little joe' variety is slightly smaller than the natural species and more compact. Its flowers provide nectar and pollen for a variety of pollinators including bees, butterflies and flower flies. It is also the larval host for many moth species and birds eat its seeds. Blooms July to September.
